

Defense Industry Security as a Service

Government agencies, defense departments and defense industry prime contractors are rightly concerned that the aerospace and defense (A&D) industry is vulnerable to cyber-attacks in its supply chain. The companies that sit in the layers beneath the large prime contractors in many instances do not have the in-house expertise, security systems or financial capacity to implement and maintain robust cyber security methods.

As the A&D industry embarks on mega projects that rely on thousands of organizations to deliver the required outcomes, existing suppliers will grow, and new suppliers will enter the defense market. Security will be an imperative to ensure the following:

- Safeguarding national interests and government defense data
- Securing allies' defense intelligence and technologies
- Protecting intellectual property
- Controlling access to sensitive defense data and personnel data

Industry on all fronts must strengthen and counter against the ever-growing, evolving and persistent threat of cyber-attacks. Security must be the focus if supply chain organizations are to be trusted with access to government secrets and leading-edge defense technologies. Security is paramount when sharing data between allied, geographically dispersed organizations and extreme operational considerations.

Improving your security posture

DXC Technology has invested significantly in developing security capabilities that improve the security postures of small, medium and large organizations. We offer these capabilities as Defense Industry Security as a Service (DISEC).

Built upon 35 years of defense and security experience, DXC offers A&D customers:

- 13 global and local security operations centers, or SOC's
- Digital security solutions
- Defense, security and export controls knowledge and consultants
- Extensive partnership and relationship ecosystem
- More than 4,000 security personnel globally

DXC combines the right people, processes and technology to protect government and defense industry data. We have extensive experience in providing services to many government departments, defense industry companies and manufacturing organizations. DXC services are compliant with required local and international standards.

DXC has unparalleled reach across a network of security operations centers, and we manage and monitor security environments for sensitive government customers with 24x7 support.

Using advanced threat detection and response capabilities underpinned by global threat intelligence, we help customers find and shut down threats to secure business operations and reputation.

DXC's framework of capabilities can be utilized on government, defense and manufacturing industry accounts. These capabilities encompass:

- IT risk management
- Audit and compliance management
- Identity and access management
- Security policy and controls and security compliance reporting

- Threat and vulnerability management
- Anti-malware management
- Infrastructure, network and endpoint security
- Security monitoring

Defense Industry Security as a Service (DISEC)

DXC offers DISEC for small, medium and large defense industry organizations. Basic services include:

- **Quick-look security and export controls assessment** — assessment and reporting includes onboarding assessment questionnaire
- **Security awareness training** — online training for employees
- **Threat intelligence** — a combination of research, security operations center (SOC), incident response capability and threat intelligence teams that enhance threat detection through actionable intelligence
- **Phishing simulation threat tests** — simulations to test and train employees in cyber security awareness
- **Perimeter vulnerability scanning** — periodic nonintrusive network and agent-based scanning, to discover and prioritize known vulnerabilities, and help plan and track remediation
- **Quarterly reports** — electronic reports issued with security posture status and highlighted issues
- **Export controls compliance (includes U.S. ITAR/EAR) advisory consultancy** — access to 5 hours of export controls advisory services via telephone or email
- **Security advisory consultancy** — access to 5 hours of security advisory consultancy via telephone or email

Security solutions and services

DXC's extensive security solutions are available optionally:

Security services

- SOC capability and services
- Cyber attack response services
- Advisory consultancy (gap analysis reviews, compliance assessments)
- Systems security plans and remediation action plans
- Penetration testing
- Infrastructure and network security services
- Export controls compliance (ITAR/EAR)
- Personnel and building security assessment/advisory
- Endpoint protection and antivirus/malware software
- Cloud security

Digital systems and transformation services

- DXC information and communications technology (ICT) portfolio of offerings — from digital transformation and mobilization to point solutions
- A&D compliance-led ICT solutions

Proven security experience

Successful security partnerships rely on trust, the willingness of the stakeholders to work together and a shared commitment to achieve success.

The DISEC solutions are founded on:

- Trusted independence underpinned with domain experience across defense, security and export controls
- Connection to extensive security networks, including DXC's global security intelligence operations centers

About DXC Technology

DXC Technology (NYSE: DXC) helps global companies run their mission critical systems and operations while modernizing IT, optimizing data architectures, and ensuring security and scalability across public, private and hybrid clouds. With decades of driving innovation, the world's largest companies trust DXC to deploy our enterprise technology stack to deliver new levels of performance, competitiveness and customer experiences. Learn more about the DXC story and our focus on people, customers and operational execution at www.dxc.technology.

DXC's security services and solutions are provided across all major industries.

These include: federal and local governments, defense industry, banking and financial services, healthcare, general manufacturing, chemical, transport, energy, oil and gas, mining and nuclear.

DXC's vendor-agnostic approach to supply chain solutions (software, hardware and services) provides an independent value-for-money basis for sourcing from a wide variety of suppliers. Our solutions are designed to align with customer preferences/requirements and to comply with defense industry operating constraints.

Why DXC Technology

DXC has a complete security portfolio to protect the enterprise, detect threats and respond to attacks. We execute defense projects for technologies that are subject to defense operating constraints, strict security requirements, and global import and export controls. All defense industry solutions are founded on a basis of governance and compliance, conducted by experienced and qualified resources with appropriate defense security clearances and authorized nationalities.
