

Get the most from your applications

DXC Application Services

Deliver the experiences customers want and the results you need.

Benefits:

- Reduce costs by up to 40% compared to traditional models
- Accelerate time to business value through automated and industrialized models
- Use AI to reduce mean time to resolution of application incidents
- Improve application quality through process automation and analytics

Why DXC?

- DXC is recognized as a global leader in applications services
- 50,000+ applications professionals, serving more than 1,000 clients across 70 countries
- 9,000+ agile and DevOps practitioners; 1,900+ certifications in agile and scaled agile
- Gold partner with Scaled Agile Inc.
- 1 million+ applications and 2.6 billion lines of code managed globally

Shifts in market conditions, brutal competitive landscapes and increasing customer expectations are forcing enterprises to rapidly deliver new business services while operating IT even more efficiently. At the same time, application portfolio complexities, aging legacy systems, nonstandard delivery models, inadequate security and lack of skills stubbornly keep enterprises' spending on applications high. In the face of flat or decreasing budgets, enterprises struggle to invest in innovation, develop new digital capabilities, automate processes and deliver satisfying customer experiences.

When developed and deployed effectively, modern applications can deliver the experiences customers crave and the business results enterprises need. But how do you get there?

DXC Application Services helps you leverage your applications to reduce costs, advance digital strategies and drive business growth. Your enterprise becomes more secure, digital and data-driven — so you can give customers what they truly want.

Radically transform apps processes

DXC Technology leads your digital transformation by shifting IT spending from operations to innovation. Our secret sauce is a delivery model that features return on investment-focused applications modernization, automation, development (including security and

testing) and management. We extend traditional IT with next-generation application technology and combine our intellectual property (IP) and coinvestment with a world-class partner ecosystem. Our flexible, consumption-based commercial models scale globally to drive business outcomes and enrich user experiences.

DXC Application Services, a rich portfolio of solutions, radically transforms how you develop and manage applications. Key components include:

- **Digital Applications DevSecOps** facilitates the changes in culture, practices and technology needed to accelerate and scale DevSecOps — so you can deliver high-quality software with security embedded in the process. This complete set of services helps IT leaders overcome traditional mindsets and get the most business benefit from DevSecOps methods.
- **Core Applications Development Services** provide the capability, scale and speed to drive business agility and digitalization. Our experts develop feature-rich and secure business applications that run on a variety of technology and user platforms and leverage industrialized and lean delivery. DXC partners with you to build and manage an applications portfolio that continuously increases IT value and maximizes business outcomes.

- **Testing and Digital Assurance** combines DXC's unique IP with our testing-as-a-service model, advanced test automation assets and strong partner ecosystem to quickly deliver optimum testing outcomes. Our comprehensive portfolio of application testing services mixes emerging technologies with our IP, tools, frameworks and accelerators to help you quickly achieve your business objectives.
- **Application Management Services** transform your application management landscapes by deploying next-generation lean, analytics and automation tools. Our capabilities mean we can integrate and operate diverse environments ranging from modern cloud applications to traditional legacy applications.

Proven success

As a global leader, DXC has helped hundreds of enterprises gain measurable business benefits from transforming their applications. DXC Application Services have a strong track record of proven success, including the following business results:

- For a telecommunications company, we accelerated development cycles and savings by deploying agile methods at scale, resulting in a 40 percent reduction in applications time to market.
- For a major airline, we deployed testing as a service, which produced cost savings of 43 percent and a 66 percent reduction in testing cycle time.
- For a government agency, we delivered enterprise scale with extreme automation, driving visibility, efficiency and \$12 million in annual savings.
- For a global retailer, our application service automation reduced incidents requiring manual triage from 94 percent to 5 percent.
- For a healthcare insurance provider, we reduced Severity 1 incidents by 75 percent, which lowered administrative expenses by 39 percent.

The ISG Provider Lens Global 2019 Quadrant Report concluded that DXC is able to “achieve a high degree of automation, especially in three areas: customer engagement, claims (self-service) and back-office processing.”

DXC has unmatched global reach and the capabilities to deliver superior end-to-end frameworks, processes, risk mitigation and planning. Wherever you are in the world, we can work with you closely to develop and deliver the digital services that drive your desired business outcomes.

Underlying our digital services is DXC Bionix™, a comprehensive, digital-generation services delivery model that implements intelligent automation at the scale required by the world's top companies — as well as by smaller

enterprises. It uses analytics and artificial intelligence (AI), lean processes and leading automation capabilities to produce greater insight, speed and efficiency across our global delivery ecosystem.

DXC is product-agnostic and views application services through a very concise and straightforward lexicon: design, digitize and scale.

We leverage design thinking, lean processes, agile development and DevSecOps to deliver applications services that address the full applications estate — from ideation and fast-cycle development to industrialized, scaled delivery.

Next steps

DXC is ready to help you transform your applications landscape. Contact your DXC representative to conduct an Applications Transformation Experience workshop to plan your transformation journey. You can then conduct broader portfolio assessments and develop a holistic roadmap.
