

# DXC HYBRID CLOUD SERVICES

## DXC Technology and VMware strategic partnership

Modernise your IT environment with DXC Technology and VMware. Building on over 15 years of co-development experience, we have an extensive track record of helping enterprises simplify IT and create and implement successful multi-cloud strategies. Our joint offerings for Managed Hybrid Cloud Services are built on VMware's market-leading technology and DXC's extensive IT and industry expertise to accelerate time to value, increase productivity and strengthen security.

### Joint solutions

Our four core Managed Hybrid Cloud Services solutions are innovative and consumption-based. Accelerate your journey to the hybrid cloud with an operationally consistent, resilient, secure and cost-effective environment.

**DXC Managed Multi-Cloud Services powered by VMware** simplify hybrid cloud management, allowing you to expand your use of private and public clouds as business requirements evolve. This solution enables DevSecOps with intrinsic security and governance and uses Infrastructure as Code for blueprinting, deployment pipelines and policies to automate managed services delivery and optimise costs.

**DXC Managed Services for VMware (MSV)** platform delivers dedicated, managed and complete cloud capabilities. This solution simplifies operations via API-based automation, extends visibility using a self-service, on-demand model and increases utilisation rates by optimising workload placement. Quickly and securely improve operational agility and scalability with enterprise-level IT control. Additional DXC services powered by VMware technologies and platforms include hybrid cloud automation, provisioning and workload management, cloud management and industry-specific cloud services.

**DXC Managed Services for VMware Cloud on Public Cloud** offer VMware software-defined data centre technologies as a service on the world's most popular public clouds. Dedicated Amazon Web Services (AWS), Microsoft (Azure) and Google (GCP) bare metal infrastructure provide easy scalability using hyper-converged physical hosts. A self-service portal speeds and simplifies provisioning and life-cycle actions. Cost-effective, consumption-based services provide a seamless application migration and adjacency to take advantage of public cloud-native services.

**DXC Managed Services for Virtual Private Cloud** offer a highly secure compute and storage environment delivered from DXC data centres to reduce latency, meet data sovereignty and high availability requirements. Engineered as a multi-tenant managed cloud service, this solution enables you to gain rapid and cost-effective access to scalable IT infrastructure to meet changing business needs. Through a self-service portal, you can choose from virtual or physical compute configurations, multiple tiers of managed storage and network connectivity options configured to meet diverse business and compliance requirements.

## Differentiation

Together, DXC and VMware have over 56,000 experts and a vast ecosystem of partners to design, build, deliver and support digital transformation solutions. Our companies are integrated from the executive suite down to the delivery team level and share a highly collaborative approach to working with clients.

VMware is the preferred choice of 100% of Fortune 500 companies. Its virtualisation technology provides the market's lowest TCO. DXC's expertise in creating agile, scalable infrastructures and VMware's virtualisation solutions results in immediate and lasting returns on digital transformation investments

## Client benefits

Digital transformation is the proven path to lasting competitive advantage and business agility. Partnering with DXC and VMware on the journey helps you effectively:

- Modernise data centres
- Integrate public clouds
- Empower digital workspaces
- Transform security
- Manage multi-cloud infrastructure

DXC helps clients across a variety of vertical markets to thrive on change and harness the power of innovation to make information-driven decisions. VMware, a global leader in cloud infrastructure and business mobility, helps clients recognise the possibilities by accelerating their digital transformation journeys.

Together, DXC and VMware are committed to transforming the way you build, deliver and consume IT resources. We offer a strategic vision and joint solutions that empower you to:

- Accelerate time to value and time to market by moving securely and rapidly to multi-cloud services and extending the value and performance of your legacy infrastructure
- Unlock productivity and protect customer trust by providing personalised access to any application from any device while safeguarding corporate assets with end-to-end security
- Leverage expertise and experience accumulated over 50-plus years of systems integration and managed services experience helping clients plan, build and deploy the best systems for their business

Our joint solutions help you create highly adaptable IT infrastructures that simplify processes and evolve with your ever-changing business requirements.
