

# Make the move to SAP in the cloud

SAP applications are the lifeblood of operations, but developing, testing and deploying them can be costly and time-consuming. Private and public cloud options offer ways to lower costs and speed time to market through faster provisioning, but many organizations

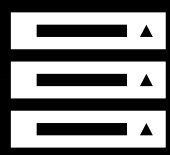

struggle with supporting SAP in a cloud-native environment. That's why an increasing number of companies are seeking a full-stack automated solution for SAP in the cloud across the infrastructure, platform and application.

## Fully managed, full-stack support for SAP

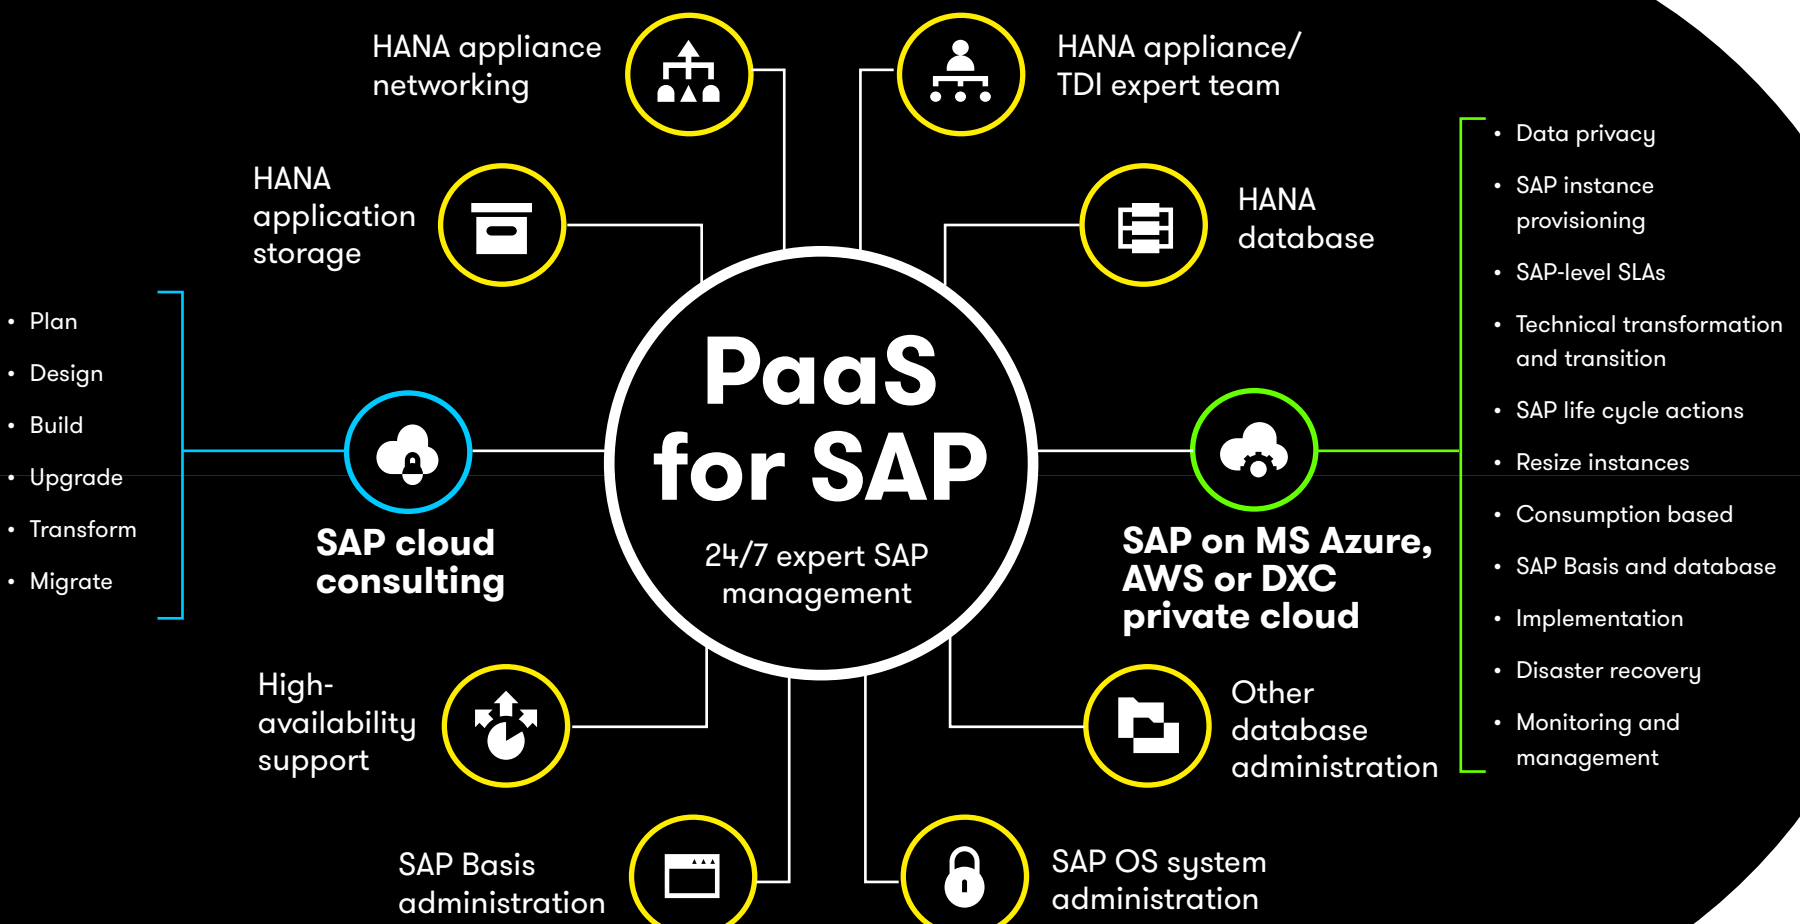

DXC Technology can help you manage SAP on your platform of choice with ease. DXC Platform as a Service for SAP offers an integrated, full-stack SAP systems management solution that runs on DXC Virtual Private Cloud (VPC), Amazon Web Services (AWS) or Microsoft Azure.

For enterprises currently looking to transition to cloud, we provide ongoing SAP systems management, run support, planning, design and transformation, and transition for your operations.

### Modular SAP service desk
