

DXC Eclipse Power Platform Discovery Safari

Identify, qualify and quantify your business problems for action with the Power Platform

A compelling reason for action

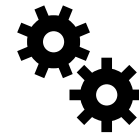

Every business has areas where improvements can be made to increase efficiency and productivity and/or simplify workflows and streamline processes.

Bring together the right people from within your business to uncover where your business problems currently exist. We will work with you to address these issues and classify where we can 'add value' to your business processes, then hypothesise how these can be addressed with a Power Platform solution.

We will then rank these proposed solutions with you to deliver a back log which you can address as budget and resources allow.

Create a well-budgeted 'go forward' plan to prioritise, manage and address your business problems, ready for solving with the Power Platform.

Let's go on Safari with Microsoft Power Platform

Understand the power and application of Microsoft Power Platform as how it addresses your unique requirements:

- Learn how and where the Power Platform can solve your business issues
- Discover which issues in your business are best suited to a Power Platform solution
- Rank your issues in terms of 'value add', solution effort, resource requirements
- Define your Power Platform Backlog and take control of the planning and management process.

On-line, interactive workshop delivered via teams:

- Training is delivered by a qualified member of the DXC Eclipse Power Platform team
- Run via Microsoft Teams online meeting
- Standard session 2.5 hours
- Sessions available from May 2020
