

DXC PRIVATE CLOUD SERVICES

Accelerate your digital transformation across hybrid cloud to increase agility, be more productive and meet regulatory and security requirements

To survive and thrive in this disruptive digital economy, the secret is finding the right mix of infrastructure and platform services to match your unique application and delivery model requirements. Transformation to a new digital core is about moving from the current state to a future, business-aligned hybrid infrastructure.

Delivering value quickly and continuously in an agile way requires a blend of three primary workload landing zones – traditional infrastructure, public and private clouds.

By 2024 **90%** of Global 1000 organisations will have multi-cloud management strategies that include integrated applications and services operating across public and private cloud platforms.¹

Agile, optimised, secure IT infrastructure on demand

DXC Private Cloud Services deliver the speed along with high security levels of private cloud available as CapEx and OpEx options, with lower TCO than public cloud. A fully managed service, it includes deployment and ongoing environment management, allowing you to focus on more critical business initiatives. Choose your Private Cloud location to comply with your data sovereignty requirements – on your own premises, or at a specific DXC or third-party facility with guaranteed service levels.

DXC Private Cloud Services offer greater security options than one-size-fits-all public cloud solutions. We design a security model to integrate with existing network and security – leveraging hardware or software-defined networking, to ensure application workloads are appropriately protected.

Provision or de-provision of virtual or physical services (compute, storage, network, backup) are available via an intuitive service catalogue or through APIs, allowing integration with your CI/CD pipeline.

Speed to market

DXC delivers the full lifecycle of private cloud services. Accelerate to a managed private cloud using our industry-leading private cloud technology stack and engineering know-how including:

- **Professional services** to design a customised enterprise-grade cloud solution based on CapEx or OpEx
- **Full management and infrastructure lifecycle services** including evergreen release management for automation and orchestration
- **Expert management** of IT consumption and enterprise-grade SLAs – with access to the DXC Private Cloud Services catalogue

DXC Private Cloud Services

Considerations:

- ✓ Not all applications are right for public cloud – select those that require flexibility and scalability
- ✓ Don't underestimate the effort required to re-architect older programs for public cloud
- ✓ Hybrid architecture is key to a successful transformation

DXC Private Cloud Services offer flexibility in the location, technology and protection of your valuable data assets – enabling you to meet your specific regulatory and corporate compliance requirements for data sovereignty, privacy and security, while increasing productivity.

Benefits

DXC Private Cloud Services deliver everything you need for the agility, speed and security to compete in the digital economy – letting you focus on your strategic priorities.

- Increased agility and time to value through automated provisioning of infrastructure, platform and services via self-service capabilities
- A future-proofed platform supporting multi-purpose workloads, leveraging packaged blueprinting capabilities across containers, virtual and physical machines
- Innovation commitment through multi-year roadmaps and updates to maximise the value of your private cloud platform
- Experience all the benefits of the public cloud with the safety and security of private cloud
- Meet regulatory and compliance requirements confidently
- Optimise your infrastructure to address specific workload performance requirements

CapEx to OpEx	Improve efficiency	Improve security
We helped a manufacturing and distribution company consolidate from three data centres to one on a consumption-based model in under 5 months.	Our consumer packaged goods client migrated 500 applications and created a new portal to reduce TCO by 30% - reducing their procurement lifecycle from a week to under a day.	A major financial institution gained a stable, mature and highly secure service with no major breaches, preventing spam, phishing and other potential sources of malware.
