

Managing your assets for efficiency enhancement in your logistics!

Controlling and monitoring in supply chain becomes more and more important, also with the growing availability of data. Logistic processes grew very complex and often lack in transparency and which leads to higher costs and discrepancies throughout supplier und customer.

Bringing efficiency and transparency into logistics processes, Evertracker has developed a solution that enables supply chains and logistic processes to be controlled, managed and predicted. Their Artificial Intelligence solution provides, besides logistics control, quality management and asset management enabling transparency and efficiency enhancement.

Together with DXC Technology the solution is easily integrated into your existing systems and can be utilized in full quality.

Benefits

- ▲ shippers and recipiernts can settle services in time and fully transparent
- ▲ customers get accurate insights into shipment details (e.g. arrival) for better planning and reduction of unnecessary costs
- ▲ optimal and efficient process chain and production planning

Usecases

- ▲ Automotive: Support manufacturers in the process of digitizing and managing their logistics processes
- ▲ Postal service: efficiency enhancement in package and post services and control of the last mile delivery tours of international postal operators

evertracker 

- ▲ Hamburg, Germany | 2014
- ▲ Evertracker offers platform technology that analyzes, optimizes and automates workflows within logistics and process chains
