

Protect your data while managing costs

DXC Backup as a Service

Convert your data backup to modern, secure disk-based technologies and pay only for what you use.

Benefits

- Reduce capital investment and support costs by 30 percent.
- Access the latest backup and recovery technologies.
- Benefit from end-to-end support through managed services.
- Ensure secure and consistent practices across the hybrid IT environment.

If your organization is like most, demand for data backup and protection is growing. And so are the costs to maintain these backups. Data centers are notorious for consuming power and space, which means most organizations must continually buy excess capacity to respond to new business requirements. In addition, in-house operations staff must continuously keep pace with accelerating technology innovation — further driving up costs.

Backups — and more importantly — restores must be readily available, highly secure and within your budget. Given the advances in cloud and hybrid IT environments, it's time to replace your capital budget, backup operations, asset management, tools and facilities with a secure, flexible pay-per-use option from a trusted partner.

Backup that fits your budget

DXC Backup as a Service provides cost-effective managed service for backup and recovery of all types of data. You can choose whether you want the data hosted in your data centers and remote offices, DXC Technology data centers, or public cloud environments, and then we handle the purchase, configuration, protection and management of your data.

Regardless of the type or location of your company's data assets, DXC Backup as a Service can protect your data. We provide this service where you need it, and we ensure compliance with national data sovereignty rules through locally deployed assets and in-country support.

DXC provides protection for all of your structured and unstructured data, while enabling self-service restoration capability to your application teams. We provide support for:

- Virtualized environments, including guest or image-level data protection
- Databases that include Oracle, SQL, SAP, SAP HANA data protection
- Email systems, including Exchange and Lotus Notes
- Internet databases, including Apache Cassandra and CouchDB, as well as MongoDB

Upgrade your backup

Traditional data backup methods rely on magnetic tape, racking up costs for the recording equipment as well as the tape storage and retention. DXC Backup as a Service eliminates the need for tape backup, and provides a centralized, scalable solution for critical and noncritical data. See the results on your bottom line: You can transition costs from a CAPEX to an OPEX model and save up to 30 percent of your total data backup costs. Additionally, our backup services draw on the latest data protection technologies to keep your data safe.

For example, a global educational testing company was able to improve the backup and recovery of its largest database environment. DXC Backup as a Service reduced backup and recovery times by 95 percent, which helped the client address a daily issue of overrunning backup windows.

About DXC in Backup and Recovery

- Experience with managing 750+ petabytes of storage and 250 petabytes of backup data
- Partnerships with best-of-breed hardware and software providers to create a robust, enterprise-class service
- ISO 27001-certified data centers, with processes to ensure ISO 9001 and ITIL compliance
- Global support for backup services in 22 countries, with onshore and offshore delivery models

Industries supported

DXC provides backup solutions for clients in all industries, including:

- Banking and Capital Markets
- Communications, Media & Entertainment
- Consumer Industries & Retail
- Energy & Utilities
- Healthcare & Life Sciences
- Insurance
- Manufacturing
- Public Sector
- Travel & Transportation

In another example, a North American shipbuilder was able to achieve 25 percent savings over 5 years for its backup environment while reducing capital expenditure by \$3 million.

Why choose DXC?

DXC is one of the few companies in the world that can deliver end-to-end backup services and support:

- **Cost Optimization.** Unlike competitors whose models increase backup costs over time, DXC helps clients optimize and even reduce backup costs. Our approach provides backup mobility among physical hosts, private virtual clouds and public cloud environments for all types of data and applications.
- **Expertise.** DXC manages 250 petabytes of backup for clients, and it has over 50 years of experience in managing compute and data environments for commercial and public sector organizations across the globe.
- **Flexibility.** You can quickly scale backup needs up and down based on business demand through a simple service catalog and a 10 percent capacity buffer.
- **Traditional and hybrid experience.** DXC is one of the few providers that can fully understand both your legacy storage environment and the impacts of cloud, hybrid and as-a-service compute and storage models.
- **Security.** DXC provides end-to-end security expertise to protect your data, offering three levels of data protection, from replication to full disaster recovery. We can deliver DXC Backup as a Service in the most highly secure environments.

About DXC Technology

DXC Technology (DXC: NYSE) is the world's leading independent, end-to-end IT services company, helping clients harness the power of innovation to thrive on change. Created by the merger of CSC and the Enterprise Services business of Hewlett Packard Enterprise, DXC Technology serves nearly 6,000 private and public sector clients across 70 countries. The company's technology independence, global talent and extensive partner network combine to deliver powerful next-generation IT services and solutions. DXC Technology is recognized among the best corporate citizens globally. For more information, visit www.dxc.technology.

Flexible service options

DXC Backup as a Service provides a reliable, managed and centralized backup solution for your corporate data and requires minimal infrastructure buildout. Service options include:

- Operational backup with next-generation data protection storage
- Offsite replication
- Remote office protection
- Defined SLAs and Service Level Objectives (SLOs)
- Support for industry-leading private, hybrid and public cloud storage
- APIs for integration and automation

Ensure efficient operations

With DXC Backup as a Service, you can back up your data safely, avoid the need to overprovision and pay only for what you use. You'll benefit from improvements in backup technology without capital outlay, personnel re-skilling or costly business disruptions. You'll also realize efficiencies through:

- **De-duplication and compression technologies.** Ensure that multiple copies of the same data are removed from backup cycles, optimizing capacity.
- **Standard APIs.** Make your backup data portable for hybrid and cloud computing models.
- **Service automation.** Improve back-office services of monitoring, alerting and reporting.
