

Enhance network speed, access and reliability

DXC Managed Connectivity Services

Accelerate the flow of crucial data while maintaining quality and managing security concerns.

Benefits

- Deliver global connectivity with our AT&T alliance.
- Access on-demand connectivity out of DXC data centers.
- Provide third-party connectivity through innovative solutions.

Greater collaboration with customers and partners combined with an increasing use of cloud services are creating high demand for network resources in today's digital enterprise. Mobile device growth in organizations has exploded, and application portfolios have expanded dramatically to serve them. A large, geographically distributed workforce multiplies the demand. These are just a few of the factors driving the need for expanded, global, highly secure connectivity.

Transform your network infrastructure

DXC Technology offers Managed Connectivity Services that combine our system integration expertise with the network infrastructure experience of AT&T to transform and manage your network infrastructure.

Next-generation technologies are creating a virtualized environment where network, platform and applications are indistinguishable to the end user. Enterprise IT must gain the ability to manage the technology stack from top to bottom. In this environment, DXC helps clients simplify the management of network resources, increase efficiency and drive down costs.

Manage costs while moving to next-generation solutions

DXC helps you see the cost and service delivery benefits of moving to next-generation solutions, while

maximizing the life span of your legacy infrastructure. Our network services include features critical for today's digital business.

- **Global Connectivity** provides a standard, highly secure, SLA-driven, competitively priced solution to clients in all regions.
- **On-demand Connectivity** enables clients to take advantage of DXC's market presence to buy what they need when they need it, while maintaining the security and quality they expect.
- **Third-Party Connectivity** allows clients to use the transport providers they prefer while keeping DXC responsible for overall solution integration.

Global Connectivity

Through our strategic alliance with AT&T, DXC provides a globally consistent set of connectivity solutions.

DXC VPN, Powered by AT&T, is an MPLS Service that creates a highly secure network connecting multiple locations and users. AT&T has MPLS presence in over 195 countries and territories and works with other providers where it does not have a physical presence. Our VPN solution offers support for both IPv4 and IPv6 and is available as an unmanaged or managed service. It supports multiple access methods, including Ethernet, broadband and wireless.

DXC Dedicated Internet Service, Powered by AT&T offers symmetric access, guaranteed provisioning and around-the-clock technical support. Connections are dedicated, not shared with other businesses, and provide a symmetrical connection (equal upload and download speeds) to support critical business applications. AT&T has global IP Network peering locations in 44 cities in 28 countries. Our Dedicated Internet service includes industry-leading SLAs with managed local access and in-country, in-language support in 18 different languages.

DXC SD-WAN Static Over the Top, Powered by AT&T is a PCI-compliant VPN solution that sends encrypted confidential business data over the internet or other public networks. Our SD-WAN Static Over the Top service can easily support small offices, remote work sites and site-to-site VPN. A wide variety of access methods can be used, including broadband, wireless, dial-up or dedicated access. This solution does not require AT&T support.

DXC SDN-WAN Static Network, Powered by AT&T, provides a highly secure, internet-based VPN that cost-effectively extends the reach of any AT&T MPLS VPN. This hybrid VPN solution leverages the private and predictable MPLS performance with the economical ubiquity and reach of broadband internet with gateways available in all DXC regions. No capital outlay is required to establish our SDN-WAN Static Network Based service. In addition, our fully PCI-compliant solution offers fast and easy implementation and 24x7 support.

On-demand Connectivity

On-demand Connectivity Services allow customers to use DXC infrastructure to get just the right amount of connectivity to support their requirements. These connectivity services are limited to locations supported by DXC data centers. Services include DXC Leveraged Internet Services (LIS) and DXC Corporate Global Enterprise Network (CGEN) Services.

DXC Leveraged Internet Services (LIS) is a competitively priced internet service. LIS provides carrier-based distributed denial of service (DDoS) and optional IPSec service. LIS offers 99.95 percent availability within DXC's point of presence and dual, independent connections. Flexible pricing options are available.

DXC Corporate Global Enterprise Network (CGEN) Services are our data center to data center connectivity option within the DXC data center footprint. CGEN provides both MPLS and Internet connectivity, as well as firewalls between DXC data centers, and is priced by committed MBps. Pricing varies by data center.

Third-Party Connectivity

Sometimes, alternative connectivity solutions are the best option. Regulatory requirements may prevent a client from using DXC connectivity as part of a broader DXC-supplied solution, or the client may simply prefer to use an existing carrier for transport. DXC supports several third-party solutions that address these requirements, allowing DXC to maintain overall solution responsibility.

- **DXC Carrier Management Services** – DXC provides Carrier Provisioning & Inventory, Carrier Governance, Carrier Broker Services, and Telecom Expense Management on our client's behalf.
- **DXC Rapid Connect** – DXC provides prestaged vendor bandwidth at multiple DXC data centers. This offering can be viewed as a “force multiplier,” providing quick and tested infrastructure deployment to our traditional and cloud services. Rapid Connect is an Enterprise Build Services Program.

Learn more

DXC and AT&T have combined to develop a unique business model, capitalizing on DXC's leadership in next-generation solutions and services with the industry-leading global networking capabilities of AT&T. Together, we create offerings that are market-ready and available for global deployment at scale.

Contact us at www.dxc.technology/contact_us to learn how DXC can provide you with the right combination of next-generation network services to fulfill your requirements from the remote branch end user to public, private and hybrid cloud environments.
