

Get your own cloud and your own outcomes

DXC Managed Services for VMware

If agility, speed and security are the primary benefits you need to achieve, then a managed private cloud solution could be for you.

Key insights

- Knowledge, experience and budget constraints can prevent you from moving forward with new, agile and secure IT services to meet your business' demands.
- DXC Managed Services for VMware ensures security and privacy, with ongoing management and infrastructure lifecycle services.
- To ensure your access to the latest and future technologies, multiple vendor hardware configurations are available to meet your specific workloads.
- Evergreen release management of automation features ensures that automation keeps pace with technology changes. As we release new features, you can select only the features that drive value for your business.

Industry list

DXC Technology helps clients maximize their workloads across industries in a variety of environments: on-premises, cloud or hybrid.

- Automotive
- Banking
- Communication, media and entertainment
- Energy, mining and utilities
- Financial Services and Insurance
- Healthcare
- Life sciences
- Manufacturing
- Public sector

Organizations are transforming their business processes and operations to add value in a fast-paced, global service economy. IT leaders are moving to a digital model by allocating more resources for strategic initiatives versus only handling maintenance and support activities.

Without a partner to deploy and manage cloud services, IT seldom focuses on business innovations. For public sector organizations, innovation provides new ways to engage with constituents and add value. For commercial organizations, innovation provides new routes to market and greater customer satisfaction.

DXC Managed Services for VMware is an integrated infrastructure-as-a-service (IaaS) solution. It consists of market-leading hardware, software and services that provide the agility, speed and security needed to compete in the digital economy. This single-tenant service is available from either a client-owned, DXC or third-party location and addresses regional data sovereignty and regulatory compliance.

Get it done fast

Accelerate to a 100% dedicated, managed private cloud using our industry-leading technology and resources, including:

- Initial advisory, transformation and ongoing services to provide a complete cloud solution integrating hardware, software and services into a dedicated enterprise-grade cloud model
- Management and infrastructure lifecycle services to improve your IT asset utilization, flexibility and security

- A web-based portal enabling you to manage your IT consumption and enterprise-grade SLAs
- Evergreen release management for all automation features to ensure that automation keeps pace with technology changes

The cloud to target your workloads

DXC Managed Services for VMware is available on multiple industry-leading vendor hardware configurations and cloud management infrastructure. Its VMware-based stack provides standard, base and scale-out infrastructure and service options for physical and virtual servers, operating systems, storage, continuity, connectivity, network and service SLAs up to 99.95%.

With server configurations ranging from small virtual servers to large physical servers, DXC Managed Services for VMware environments can support a broad range of workloads—from application development and hosted email to ERP systems and analytics—all managed by a single management infrastructure. With integrated hardware and software, you can create virtual pools of servers and storage resources on demand. You can select these services based on your designs and DXC best practices via the self-service catalog. DXC Managed Services for VMware lets you instantly adjust to dynamic business demands, enabling rapid design, provisioning and modification of your infrastructure environment in minutes. An IT governance model helps you get a predictable service quality, improved

speed and agility, and optimized IT capacity across physical and virtual infrastructure environments. With a managed private cloud solution, you can provision resources faster, manage services better and do both more securely.

Measurable business results

Our offering shifts the burden and expense of building and managing an on-demand IT infrastructure to DXC. This enables enterprises to focus on their strategic priorities and provides clients with a full range of advisory, workload transformation and cloud stack infrastructure managed services to accelerate their time to value.

Benefits our clients achieved include:

- **No capital expenses (CAPEX)**— A manufacturing and distribution company consolidated from 3 data centers to 1 in under 5 months with no new CAPEX.
- **Improved efficiency**— A consumer packaged goods client migrated 500 applications and created a new portal to reduce TCO by 30%; and reduced the P.O. lifecycle from 1 week to less than 1 day.
- **Improved security**— A major financial institution gained a stable and mature service with no major security breaches, blocking millions of emails per month (80% of total email), preventing spam, phishing and other potential sources of malware.

The DXC edge

- **Expertise**—DXC cloud strategy, investments and 45,000 cloud professionals deliver tangible results and mitigate risk.

² IDC MarketScape: Worldwide Industry Cloud Professional Services 2016 Vendor Assessment, Doc #CA40525216, June 2016

- **Technology and high availability, resiliency**— DXC offers an open and extensible secure architecture, network and support for traditional physical and virtual servers. Active/active cloud sites provide up to 99.99% SLA uptime required by mission-critical workloads. Disaster recovery solutions from 42 recovery centers across 21 countries support low recovery point and recovery time objectives.
- **Full lifecycle of services**— DXC is the only vendor that delivers the full lifecycle of cloud services: advisory, workload migration application transformation, integration and management. These services provide fact-based, industry-relevant assessments and options for IT transformations using cloud services that deliver business value and innovation.
- **Data sovereignty, regulatory compliance, data privacy and low latency**— Consistent global delivery of world-class cloud services with hybrid delivery models across private, managed and public clouds. DXC has 95+ physical data centers, including regionalized clouds available for clients to run in-country applications for data sovereignty, privacy and security. Certification include: FedRAMP; HIPAA; Impact Level – 3 (IL3); ISO 27001, SOC 1.
- **Flexible managed cloud services**— DXC offers secure managed cloud options for OS, middleware, databases and enterprise applications. Managed backup and recovery services are also available to protect your data.

Value-added benefits

- Reduce OPEX and CAPEX via a more cost-effective, predictable and scalable service model
- Reduce risk through standardization, automation and operational tools and processes

- Use solutions that enable in-house IT to focus on business innovation and outcomes
- Reduce risk and improve regulatory compliance with world-class security
- Gain a roadmap to modernization and future mode of operations
- Keep pace with technology changes and business demands

Rely on an industry leader

- A Leader in Everest Group's PEAK Matrix™ for Hosted Private Cloud Services, 2016
- A Leader in The Forrester Wave™: Private Cloud Software Suites, Q1 2016
- A Leader in Gartner Magic Quadrants Data Center Outsourcing for Asia/Pacific, North America and Europe 2016²
- A Major Player in IDC MarketScape Worldwide Industry Cloud Professional Services, June 2016²
- More than 600 managed cloud clients and over 1200 private cloud installations worldwide
- Delivering more than 1000 customer engagements and experience running large-scale cloud environments
- Managing over 400,000 mainstream operating systems with over 240,000 virtualized or in-cloud services

Take the next steps

Arrange a follow-up call or meeting with DXC experts to explore a managed cloud solution for your organization. We can schedule an advisory workshop to define the requirements to take your critical workloads to DXC Managed Services for VMware.
