

Meet growing demands for network capacity and speed

DXC Managed Software-Defined Network Services

Rely on virtualized networking services to help reduce time, labor and costs associated with buying, installing, configuring and maintaining network equipment.

Benefits

- Adopt digital solutions while extending the life of legacy infrastructure.
- Provide highly secure, cost-effective solution for hybrid cloud environments.
- Help improve WAN and edge connections.

DXC managed services

- Network services, such as globally managed LAN, WAN, edge, connectivity and SDN/NFV services
- Campus and connectivity networks, such as wireless, location, internet of things (IoT)-enabled intelligent campus and network advisory/assessment services

The digital enterprise, with its focus on greater collaboration with customers and partners and its greater reliance on cloud services, is creating high demand for network resources. Organizations have experienced an explosion of mobile devices. Application portfolios have expanded dramatically to serve these devices. Geographically distributed workforces and expanded global connectivity are adding to the demand.

To manage these changes, DXC Technology is helping organizations shift from physical devices and fixed bandwidths to virtual solutions and services.

Reap the benefits of virtualization

DXC Managed Software-Defined Network (SDN) Services can provide lower cost and more agile virtualized network capabilities across the enterprise — from data centers to campus networks. DXC addresses three key enterprise networks:

- WAN – the backbone of the enterprise, connecting all sites
- The edge – the boundary between the enterprise WAN and campus LANs
- Data center – the networks at the heart of the enterprise

These services can help your organization meet growing expectations from a growing segment of millennials

who want to work from virtually any place on any device — and connect to productivity applications in public, private and hybrid cloud environments.

DXC can help you achieve the cost and service delivery benefits of modernizing while maximizing the life span of your legacy infrastructure. DXC will help you maintain the highest security standards, with an eye toward regulatory requirements.

We understand that business outcomes matter, and having a solid, well-managed network infrastructure is key to your success. Whether you're transforming to next-generation infrastructure or adding new functionality to your IT estate, DXC can help your enterprise make a seamless digital transformation through these Managed SDN Services:

• WAN services

WANs are the links that tie enterprises to their remote locations, clients, cloud service providers and data centers. WANs must provide highly secure services driven by SLAs while providing more agile, cost-effective connectivity.

DXC offers two software-defined WAN solutions targeted at different connectivity issues: cloud connectivity and WAN costs:

- AT&T NetBond® for Cloud is an option added to an AT&T MPLS

circuit that provides connectivity to more than 20 different cloud service providers, including AWS and Azure. With NetBond for Cloud, the cloud service providers appear as nodes on your existing MPLS network. NetBond for Cloud greatly simplifies the process of connecting while providing the security and reliability of MPLS. NetBond for Cloud is available globally and provides simple, highly secure, cost-effective support for hybrid cloud environments.

- DXC Software-Defined WAN (SD-WAN), powered by AT&T, applies software-defined networking concepts to WAN connections. Our SD-WAN solution automatically determines the most effective way to route traffic to and from campus and data center sites. DXC SD-WAN service helps lower operational and capital costs, ensuring lower total cost of ownership, greater business agility and responsiveness to keep pace with IT innovations.

- **The edge**

The boundary between the enterprise WAN and campus LANs must ensure high reliability and security. DXC and AT&T are working together to deliver next-generation technology to the edge, including:

- AT&T FlexWare(SM), which combines SDN and network function virtualization (NFV) technologies to simplify network infrastructure while potentially lowering capital

investments. By deploying software-based virtual appliances instead of hardware, your organization can reduce time, labor and costs associated with buying, installing, configuring and maintaining separate physical and proprietary network equipment.

- **Data center**

DXC Software-Defined Data Center LAN (SD-DC LAN) service enables organizations to expand their networks without being locked into vendors. Our SD-DC LAN, based on VMware's NSX and Arista switching technology, helps improve agility and security in today's hybrid computing environments.

Industry-leading alliance

DXC and AT&T have worked together for more than 20 years to support our clients' infrastructure, integration and modernization. As the network becomes an increasingly important component of next-generation cloud-based services, our combined experience enables us to provide robust and trusted network IT services.

- **Unique business model.** DXC and AT&T have combined DXC's leadership in next-generation solutions and services with the industry-leading global networking capabilities of AT&T to create offerings that are market-ready and available for global deployment at scale.
- **Strategic alliance.** Together, DXC and AT&T offer clients market-leading solutions across their IT

estates. Clients benefit from access to innovative offerings, global scale, joint solution development, multivendor integration and enhanced network performance.

- **Scale.** DXC and AT&T have more than 950 commercial clients, and we manage more than 25,000 enterprise routers, 66,000 WLAN access points and over 100 third-party transport carriers. We have more than 4,400 dedicated professionals, with access to 16,000 network integration professionals worldwide.

Take the next step

Contact us at www.dxc.technology/contact_us to find out how DXC can provide you with the right combination of next-generation network services to fulfill your requirements from the remote branch end user to public, private and hybrid cloud environments.

About DXC Technology

DXC Technology (DXC: NYSE) is the world's leading independent, end-to-end IT services company, serving nearly 6,000 private and public-sector clients from a diverse array of industries across 70 countries. The company's technology independence, global talent and extensive partner network deliver transformative digital offerings and solutions that help clients harness the power of innovation to thrive on change. DXC Technology is recognized among the best corporate citizens globally. For more information, visit dxc.technology.
