Increase business agility in the cloud
DXC Managed VMware Cloud on AWS

Get the flexibility and scale of the public cloud through fully managed private cloud services.

Benefits

- Simplify workload migration by minimizing application changes.

- Reduce data center footprint and move to an OPEX cost model.

- Deploy a single, integrated service model across all your DXC managed cloud services.

- Scale service up or down with flexible service options.

Organizations looking to digitally transform operations and IT are increasingly moving applications to the cloud to increase speed and flexibility and convert IT infrastructure spending to a consumption-based model. However, the challenges and costs associated with transforming legacy applications and migrating workloads to the cloud can be daunting.

Even after a successful migration, IT organizations are left managing decentralized support teams and maintaining resources with two different sets of skills. This makes it difficult to fully optimize cloud resources.

Moving to a managed private cloud provides all of the cloud benefits without the core challenges. DXC Managed Services for VMware Cloud on AWS combines the flexibility and scalability of Amazon's bare metal services with a dedicated, managed vSphere-based environment that enables clients to migrate to a cloud model without the time and cost of transforming applications.

Our integrated services for VMware Cloud on AWS provide a single management and support structure, as well as a dedicated flexible client portal with optional backup and virus protection services.

You can purchase configurable services through an OPEX model and scale up and down as needed — in a matter of minutes or hours — to meet business needs.

The offering also wraps an integrated set of services and automation around your VMware Cloud that eases migration and increases flexibility.

Ensure full support for VMware Cloud

DXC VMware Cloud on AWS is supported by an integrated service team that supports all of DXC managed cloud services. Benefits include:

- **Integrated services.** We provide cloud management and portal services leveraging the VMware vRealize platform.

- **Cloud scalability.** Use of VMware's software-defined data center (SDDC) on AWS bare metal makes it possible to scale to thousands of virtual machines (VMs) and enables rapid provisioning/deprovisioning.

- **Full OPEX model.** Pay only for the services you consume.

- **Targeted environments.** Our services apply to client-managed workloads and low-impact production workloads, with options to add backup and security services. Future releases will include a full suite of managed services for the VMware cloud environment, along with disaster recovery services, enhanced networking and security capabilities.

- **Regional availability.** This service is available in these AWS regions: US-Oregon, US-Virginia, EU-London, with plans to offer global services by the end of 2018.

Benefits to your bottom line

This managed VMware environment enables you to leverage the scalability of the cloud so you can keep pace with changing business needs without the time and expense of full-scale application transformation. You can increase agility and lower service delivery costs by having DXC Technology manage your cloud services with a single set of integrated services delivered by the same team across all of DXC's managed cloud services.

Why DXC for cloud services?

DXC offers an integrated service model that provides a single point of contact for DXC and VMware services. We also support DXC Managed Services for AWS and Azure, ensuring a seamless global service model across your hybrid cloud estate.

Our Advisory Services will assess your environment and identify which workload migrations provide maximum return on investment (ROI), and then move those applications to this private cloud infrastructure without requiring additional transformation.

DXC is the first announced provider of services leveraging VMware Cloud on AWS and is one of VMware's largest partners. Our collaboration with VMware ensures that our services evolve with and extract the maximum value from VMware Cloud to meet your changing business needs.

With more than 100,000 VMware virtual servers under management around the globe and more than 2,000 certified VMware professionals, we provide you with the certainty that your environment is in good hands.

In addition, DXC is a recognized leader with deep vertical expertise across all major industries. We deliver the full life cycle of cloud professional services: Consulting, Advisory, Transformation, Integration and Operational Management. Combine our breadth of service with the strength of our partnership with VMware — and you get the best of both worlds.
