

Help improve network reliability and reduce costs

DXC Managed Wide Area Network Services

Benefits

- Improve connectivity and security across IT environments.
- Accelerate application response times.
- Lower network costs through server and data consolidation.
- Avoid network slowdowns, unauthorized access and configuration errors.

Meet growing demands for network resources and support large, geographically distributed workforces while maintaining quality and security with reliable managed WAN services.

The digital enterprise, with its focus on greater collaboration with customers and partners and its increasing use of cloud services, is creating higher demand for network resources.

Application portfolios have expanded dramatically to support the explosion of mobile devices in large, geographically distributed workforces. These trends are driving the need for expanded, globally secure connectivity.

DXC Managed Wide Area Network Services combine DXC Technology's system integration expertise with the network infrastructure expertise of AT&T to transform and manage your network infrastructure.

DXC supports the global management of applications across virtualized delivery environments, delivering a consistent user experience and reliable performance through comprehensive SLAs for our managed services.

DXC has proven experience in transforming enterprises, moving them from legacy to next-generation digital networks without business interruptions. We deliver an industry-leading set of agile network solutions that can support a variety of workloads. Integrated software-defined networking (SDN) and

network function virtualization (NFV) solutions provide rapid deployment and scalability.

Next-generation network solutions

Enterprises are demanding more for less, looking for a step up in technology with a step down in price to meet the anytime, anywhere demands of millennial workers. DXC helps you achieve the cost and service delivery benefits of moving to next-generation solutions that connect to the latest productivity applications in public, private and hybrid cloud environments — while maximizing the life span of your legacy infrastructure. We help you maintain the highest security standards, with an eye toward regulatory requirements.

DXC and AT&T understand that a solid, well-managed network infrastructure is key to achieving your desired business outcomes. Whether you're transforming to next-generation infrastructure or adding new functionality to your IT estate, DXC can help your enterprise make a seamless digital transformation.

DXC Managed Wide Area Network Services are part of DXC's Network Services portfolio, which addresses global network connectivity, helping

organizations communicate internally and with customers over a highly secure, reliable and agile network infrastructure.

Fully managed router services

Through our strategic alliance with AT&T, DXC provides a globally consistent set of connectivity solutions, including DXC Managed Router Solutions (MRS) and DXC Managed WAN Acceleration, Powered by AT&T. MRS is a WAN service that:

- Integrates multiprotocol networks into one WAN solution — designing, engineering and validating the WAN architecture
- Implements the network solution and manages it across the entire life cycle
- Avoids network problems such as delays, network slowdowns, unauthorized access and configuration errors often traced back to the router
- Supports Ethernet internet, dedicated internet, MPLS-VPN and dynamic IP services

Managed WAN acceleration services

DXC Managed WAN Acceleration is a WAN optimization service that maximizes the efficiency of data flow across the WAN. WAN acceleration increases the speed critical to your information and applications. This managed service helps with:

- Improved application response times for file sharing, document management storage, enterprise

resource planning (ERP), customer relationship management (CRM) solutions and more

- Cost reduction through server and data consolidation and reduced WAN and router refresh requirements

Trust our leading services

Unlike most WAN solutions, DXC and AT&T combine next-generation solutions with industry-leading global networking capabilities to deliver market-ready services available for global deployment at scale. These services are backed by over two decades of working together to support our client infrastructure, integration and modernization. As the network becomes an increasingly important component of next-generation cloud-based services, our experience helps us provide clients with robust and trusted network IT services.

Our next-generation delivery models are designed to provide immediate and lasting improvement to network performance, at a price that's competitive with commodity-based providers, while giving our clients access to innovative offerings, global scale, joint solution development, multivendor integration and enhanced network performance.

Get the right combination of network services

DXC Network Services provide all of the competencies and experience necessary to advise, transform and manage your data center network foundation. DXC

SDN helps manage wired and wireless LAN technology, enabling automated and virtualized functions of the client branch and campus environments.

We provide:

- Network services, including globally managed LAN, WAN, connectivity and SDN/NFV services
- Campus and connectivity networks, such as wireless, location, internet of things (IoT)-enabled intelligent campus and network advisory/assessment services

Contact us at www.dxc.technology/contact_us to find out how DXC can provide you with the right combination of next-generation network services to fulfill your organization's unique requirements.
