Improve cloud visibility and governance
Managed Services for Google Cloud Platform

Reap the full benefits of Google Cloud Platform, unlock value from IT investments and manage costs, governance and risks.

Benefits

- Accelerate your move to consumption-based IT as a service

- Actively manage costs and reduce public cloud sprawl

- Improve cloud architecture, governance and ongoing support

- Access end-to-end services — advisory, app transformation, migration, managed services and security

Demands on IT for increased speed and lower costs are fueling a rush to the public cloud. Poor oversight of this decentralized environment often leads to overprovisioning of cloud services, wasteful and unplanned spending, and disappointing service levels.

For many enterprises, it's nearly impossible to understand the true scale of costs or compare actual consumption to the services provisioned. Greater visibility and better governance of these growing cloud portfolios are needed.

Full support for Google Cloud Platform

DXC Managed Services for Google Cloud Platform provide design, delivery and daily operational support of compute, storage and virtual network infrastructure in GCP. We monitor and manage system software, infrastructure configurations and service consumption using proven processes and tools.

In addition, our financial and governance services help reduce uncontrolled consumption. DXC Technology's managed services scale up and down to continually meet your changing business needs, ensuring that your IT costs and services will always align to business demand.

DXC helps you realize the full financial and operational benefits of Google Cloud Platform through end-to-end services. These include advisory services to identify workloads suited to migration to the cloud, as well as transformation and cloud migration services to take the risk out of moving core applications with complex enterprise workloads.

We offer a managed service suited to meet client IT and financial objectives. Whether you have critical workloads that demand a full suite of services or you're just looking for a light-touch service to control costs, we can scale and align to meet your needs.

DXC is uniquely positioned to support Google Cloud Platform. We're a premier Google partner with a global presence. Our seasoned expert advisors, specialized tools and services for risk mitigation, security and regulatory compliance can help you achieve savings while reducing enterprise risk.

Success with Google Cloud Platform

Our Managed Services for Google Cloud Platform can help clients easily consume cloud services and benefit from flexible consumption-based models, such as infrastructure as a service and platform as a service.

In addition to managing costs, clients can benefit from agile development and deployment of cloud-native applications. They will be able to focus on accelerating growth and innovating in their own core businesses and eliminate the heavy lifting of supporting their underlying IT infrastructures.

DXC and Google's strategic partnership will deliver additional client value through benefits such as:

- IP and innovation on Google

- Experience and expertise integrating Google services across the enterprise and providing enterprise-class DXC managed services on Google Cloud

- Global scale and delivery (DevSecOps)

- Enhanced SLAs and third-party accountability

- Cloud economics and enhanced architecture

Multiple service options

DXC offers advisory services and managed services:

Advisory Services — Quickly assess your current state:

- Analyze existing environments to align to security, compliance, flexibility and scalability needs

- Ensure the architecture is optimized for the workloads expected

- Make architecture changes as needed

Managed Services for GCP — Full system support to meet your most critical business needs:

- GCP financial analysis, management and reporting, and financial best practices

- DXC account services, including governance and collaboration

- Light-touch service management engagement with DXC service management experts on request

- Service costs that scale with your need

- Infrastructure configuration

  – Integrated IT service management of workflow, automation and governance

  – Management of virtual machines, storage and guest OS, including patching and availability management

  – Security management, including firewall, load balancer, virtual network, antivirus and backup/restore

Our services are designed to align to workload needs. For example, a full-scale managed service may not be needed for development or test workloads. Our services bring best practices and governance to the public cloud, so you can be confident in moving the most critical workloads to the cloud, deriving the value and agility you expect.

Our approach to Google Cloud Platform is as nontraditional as the cloud itself. Traditional silos for storage, compute

and networking are replaced with a fully skilled, end-to-end "CloudOps" delivery capability. We recognize that cloud, compute, storage, virtual networking and security are a set of integrated processes.

Leading Google partner

DXC Managed Services for Google Cloud Platform are built on DXC and Google's strategic partnership, which enables enterprise clients to modernize mission-critical IT and integrate digital solutions by capitalizing on the Google Cloud Platform. DXC and Google are investing in the partnership through joint development, marketing, sales and delivery of Google Cloud solutions.

DXC helps clients in all regions and industries unlock value in their IT investments and take full advantage of the digital economy. We're one of the world's few IT services companies that can cost-effectively integrate public cloud, private cloud, virtual private cloud, and on-premises computing into an effective whole. Let DXC experts advise you on bringing cost transparency, governance and operational excellence to the public cloud.
