DXC Certifications

DXC uses and continuously improves its global quality and security processes, ensuring consistency of approach and the deployment of a standard global process set to all our clients.

Created by the merger of CSC and the Enterprise Services business of Hewlett Packard Enterprise, DXC Technology boasts a proud history of innovation, service and value. Historically both companies have had a long-standing commitment to standards, models and frameworks that began over three decades ago with our first Certification in ISO 9001 (Quality Management).

Since then certification programs have continued to expand and we have built an integrated management system, that supports multiple standards, models and frameworks like ISO 9001 (Quality Management), ISO 14001 (Environmental Management), ISO 20000 (Service Management), ISO 22301 (Business Continuity Management), ISO 27001 (Information Security Management), CSA STAR (Cloud Certification), OHSAS 18001 (Health and Safety Management), ISO 50001 (Energy Management), SA 8000 (Social Accountability), TL 9001 (Quality Management in Telecom), ISO 13485 (Quality Management in Medical), BS 10012 (Personal Information Management), COBIT5, CMMI-DEV, and CMMI-SVC.

DXC has more than 600 sites in 70 countries around the world, which have one or more of these certifications. Our certifications apply to a broad and diverse range of industries including Automotive, Financial Services, Insurance, Life Sciences, Retail, Healthcare, Utilities, Manufacturing, Mining, Public Sector, Technology, Digital, Transportation, Engineering, Media and Communications.

Our Quality Assurance team is dedicated to one mission: meet the exacting standards in terms of service, quality and consistency as expected by our clients. To maintain our high-quality standards, we leverage the vast knowledge base of our worldwide team of dedicated subject matter experts in various standards, models and frameworks – ensuring that the program continues to be impartial, commercially relevant and continually improving.   Reinforcing our efforts are British Standards Institute (BSI) and Lloyd's Register Quality Assurance (LRQA) who annually conduct a comprehensive, worldwide program of independent external assessments to ensure our certifications are maintained and renewed as necessary.

Our greenhouse gas data collection and reporting approach are externally assured, in accordance with ISO 14064-3:2006. In FY 2017, this limited assurance was provided by Lloyd's Register Quality Assurance.

DXC has been part of the CMMI Institute's partner network for over ten years, and in October 2013 we were presented with an award in recognition of this long association. DXC has also been a member of the European Foundation for Quality Management (EFQM) since 1999. This membership provides access to ethical, socially responsible best practice knowledge from leading businesses around Europe.

DXC's commitment to quality is evidenced in the way we have implemented standards, models and frameworks to demonstrate our service delivery capabilities. DXC customers gain confidence in our certification and assurance programs that have fuelled excellence in the way we build, sell and deliver services for our customers.
