

Transform and optimize enterprise finance and procurement with cloud

DXC Digital Finance and Procurement for Oracle Cloud

Modernize and streamline your finance and procurement organization with automation, social collaboration and real-time access to information.

Benefits

- Gain real-time insights into financial results with modern, business-driven technology
- Realize secure, reliable procurement approvals enabled by improved agility, as well as spending control via streamlined sourcing
- Enable access to business insights for everyone, from executives to clerks, with easy-to-use solutions, embedded collaboration and robust reporting
- Access information anytime, anywhere through an immersive mobile experience, visualization and intuitive analytics
- Ensure you make the right business decisions with a “single source of truth” for data to remain competitive. In finance and procurement, this means moving from fragmented, local department applications to the cloud by harnessing and consolidating data within a single application

Industry highlights

- Aerospace and defense — Leveraging real-time embedded intelligence capabilities to bring physical and digital realms closer to support business initiatives
- Healthcare — Harnessing digital technologies to create next-generation healthcare provider management
- Manufacturing — Improving employee job safety and efficiency through real-time notification and social collaboration

Enterprises want to have a “single source of truth” for their data to ensure they make the right business decisions to remain competitive. In finance and procurement, this means moving from fragmented, local department applications to the cloud by harnessing and consolidating data within a single application.

IT staff should not spend time collecting and validating data, developing reports, and maintaining and updating spreadsheets. Instead, they should be focusing on the value-added work of developing insightful analysis, evaluating decisions, discussing options and collaborating with decision makers. Today’s highest-performing finance organizations provide their teams with the right tools and the right technology that enable them to focus on solving business problems.

Leveraging cloud to modernize finance operations

DXC Technology’s Digital Finance and Procurement for Oracle Cloud provides flexible configurations and deploys toolkits to enable automation, social collaboration and real-time access to information for enterprises looking

to modernize finance operations and streamline source-to-settle processes. You will gain better visibility to close cycles and develop insightful analysis, leading to more collaborative decision-making processes with reduced cost and risk.

Our solution provides:

- **Rapid deployment.** For large financial enterprises looking to implement a “vanilla” solution with frequent upgrades, a quick deployment using rapid implementation tools is available.
- **Improved compliance.** Large enterprises with heavy legal and compliance responsibilities can derive confidence in data quality by standardizing back-office processes and adopting self-service. This leads to highly qualified and accurate planning, analysis, reporting and compliance.
- **Enhanced scalability.** Global companies struggling to scale up can use Oracle open APIs to integrate with third-party systems, eliminating the need to abandon or replace existing applications. In some instances, our clients have recouped their API investment in 6 months.

Working with DXC

DXC brings many strengths to bear to transform your finance and procurement operations:

- **Comprehensive services.** DXC provides a wide range of Oracle business services for Oracle Cloud, including Assessment and Advisory, Transformation, Applications Management, Automation and Robotics, business process outsourcing (BPO) and IT outsourcing (ITO).
- **Cloud expertise.** DXC has wide expertise in implementing diverse cloud solutions, including Amazon Web Services, Microsoft Azure and Oracle Cloud services. We also have the capability to replatform, rearchitect and rehost non-Oracle applications in your landscape and integrate your business applications with the Oracle Cloud.
- **Scale.** DXC has more than 16,000 experts serving more than 200,000 end user clients worldwide. On average, each of our Oracle experts has over 10 years of Oracle experience. DXC has helped clients optimize software investments for more than 1,200 enterprises in more than 120 countries. DXC also has a rigorous Oracle implementation certification program in collaboration with Oracle University.
- **Speed to value.** The preconfigured DXC Oracle Toolkit includes questionnaires, configuration workbooks, test scripts and automation, providing a consistent approach to accelerate cloud migration and deliver business results in weeks, not months.

- **Strategic partnership.** DXC is an Oracle Cloud Select Partner with over 20 years of experience. As a Cloud managed service provider (MSP), we have a formal partnership with the Oracle Cloud Success Management team. DXC is also part of the Oracle Cloud Excellence Implementer (CEI) program, which recognizes superior customer cloud implementation services.

Streamlining financial processes with Oracle Cloud

DXC's solution provides a comprehensive assessment of your applications — including business processes, infrastructure and products — and assesses their suitability for transition to Oracle Cloud. We provide a roadmap for transition to Oracle Cloud, including applications and technical architecture, timeline, activities, resource requirements and costs. By adopting our solution, you can streamline supplier negotiation processes and enable compliance with procurement policies.

Our solution also provides finance and procurement teams with seamless integration to the Oracle social network so they can work socially, collaboratively and logically. We help standardize data, rules and processes across your enterprise for accounting, taxes and payments to ensure compliance with country-specific business, tax and legal requirements. The solution also provides real-time summarized balances with faster multidimensional analysis capability and drill-downs to any level, as well as unlimited hierarchies for comparisons and rollup reports.

In addition, flexible solution configurations help you:

- Gain better visibility with a collaborative closed process. Social capabilities are embedded into the business processes so conversations can be tracked and referred to.
- Automate procure-to-pay processes to ensure negotiated pricing. Terms are automatically leveraged to realize maximum savings.
- Leverage toolkits for rapid implementation and automation of business processes, enabling shorter implementation cycles and lower maintenance.

Taking the next steps to transform your business

Get started today by conducting a Cloud Readiness Assessment to plan your transformation journey to the Oracle Cloud. A DXC Cloud Readiness Assessment will provide a Cloud Roadmap Solution aligned with your organizational goals and readiness, while capitalizing on existing legacy and cloud technologies.
