

Digital solutions for enterprise asset optimization

DXC Enterprise Asset Solutions with IBM Maximo

Benefits

- Reduce unplanned downtime across mission-critical assets
- Optimize asset performance through the entire operation life cycle
- Harness the power of AI and analytics to drive advanced asset maintenance strategies
- Improve productivity of field service personnel with mobile work order management and field guidance tools
- Choose from a complete array of configurable service options

Integrate asset management and work management with business intelligence to drive asset performance.

Increasing competitive and regulatory pressures are forcing asset-intensive organizations to re-assess their asset maintenance strategies and strive to achieve a new level of asset performance. While many organizations have already implemented a basic level of asset management and maintenance scheduling software, many organizations remain reliant on primitive time-based maintenance strategies, and are not yet taking advantage of advanced analytics or IoT-enabled asset health monitoring to establish the most efficient maintenance cycles. In addition, improving the efficiency and skills of maintenance workers by providing in-field support, such as mobile technology, is an often-overlooked opportunity to drive operational cost savings.

Optimize asset performance through a holistic approach

DXC Technology helps clients optimize their asset performance by applying our unique combination of industry expertise, deployment best practices and multivendor expertise, enabling DXC to rapidly integrate all major enterprise resource planning (ERP), supply chain management (SCM) and financial applications with IBM Maximo® to streamline and automate operations. This is coupled with our holistic 4-P approach, focusing on optimizing and aligning the people, process, platform and performance elements of the solution to improve worker productivity, automate

asset operations and improve overall key asset availability and performance.

Streamline and automate operations

DXC offers an agile approach for the assessment, deployment, upgrade and management of Maximo software solutions to help clients meet their operations and asset management business imperatives. DXC brings an understanding of asset management best practices for multiple industries, along with expertise and integration accelerators for all major ERP, SCM and financial applications, enabling DXC to streamline and automate asset operations for our clients.

- **Cost efficiency** – DXC helped a power and utility company in Thailand to upgrade Maximo, streamline processes, and integrate with financial systems to improve budget management of maintenance operations by 30%.
- **Worker productivity** – DXC upgraded Maximo, as well as designed and implemented a mobile work order upgrade for a major Asian airport complex, improving worker productivity in initiating and closing out work orders by 20%.
- **Operational excellence** – A major global brewery asked DXC to consolidate 23 separate asset management systems, integrate with central financial systems, and manage the Maximo system. The company realized 30% in annual cost savings and improved support service levels.

Why DXC?

Comprehensive – DXC offers a holistic, end-to-end approach to help clients fully realize the benefits and intended business outcomes of IBM Maximo solutions. Our approach covers the entire asset management application deployment life cycle from roadmap to managed services.

Business alignment – DXC delivers measurable results by aligning application delivery to critical business outcomes.

Industry expertise – DXC brings deep industry expertise with an array of advisory services focused on enterprise asset management (EAM), to ensure a client's most pressing operational pain points are addressed.

Speed to value – DXC implementation methodology enables technical implementation to occur in parallel with requirement definition and business process design activities, resulting in an accelerated and agile deployment process, with a faster time to value.

Flexible model – DXC offers a flexible delivery model designed to identify and implement incremental asset management application upgrades, add-ons and deployment options. DXC delivers flexible software consumption models, including on-premises license resale, Maximo cloud SaaS resell, DXC managed application services and bring your own license approaches.

A full range of deployment, upgrade and managed services

DXC provides Maximo deployment services to design and implement new digital asset management business processes. We ensure alignment with business outcome goals by leveraging our DXC EAM industry experts, coupled with our 4-P approach and our proprietary integration accelerators for integrating Maximo with most major ERP, SCM and financial applications. DXC will upgrade existing Maximo software to meet a client's evolving needs, including the addition of Maximo functional or industry modules. Examples include DXC innovation in deploying advanced mobile and IoT features to optimize operational costs. A complete array of service options is available, for example, application administration, remote monitoring, and functional and technical service desk support.

Optimize asset management solutions to meet key operational metrics

Our industry expertise and understanding of asset maintenance and operations best practices enable DXC to optimize our client's asset performance and overall return on asset (ROA). Through a series of business goal-focused workshops, using our 4-P approach of people, process, platform and performance, we'll optimize asset and work order management processes to help minimize unplanned asset downtime, and optimize asset utilization throughout the asset life

cycle. DXC collaborates with clients to identify opportunities to improve asset maintenance strategies, by leveraging advanced AI and analytics solutions.

By adding and integrating the mobile and IoT add-on features of IBM Maximo, DXC can further help clients reduce operational costs related to repair and maintenance scheduling and productivity of field service personnel, improving overall mean time to repair (MTTR) performance.

Trust an experienced partner

DXC is a Top 5 IBM Global System Integration partner and Strategic Alliance partner, with over 50 years of working with IBM. Our alliance with IBM enables DXC to bring exceptional cost saving and support services to our clients in conjunction with our high value IBM technology and platform-based offers. DXC is both a client of and a business partner with IBM, with more than 8,000 resources skilled in IBM technology.

Take the next steps

- Let's understand your high priority asset maintenance and operational risk pain points and discuss examples of how we've helped other companies in your industry effectively resolve these issues.
- Schedule a workshop with DXC to evaluate how our 4-P approach can ensure you meet your business outcome goals.
