

DXC Insurance for SAP

DXC Insurance for SAP helps insurers get timely, consistent and accurate information for actionable insights and makes your organization future-ready for finance and risk management — with one standardized database and shared, integrated processes between operational, financial and actuarial systems.

Analytics empower decision making to cut costs, boost revenue and compliance

Insurance companies have three major challenges today: control costs, grow revenues and stay compliant with ever-changing regulations. The best way to meet these challenges is to use analytics to gain insight into the business and then act rapidly on this information. Transaction processing and operational efficiency are of the utmost importance. Consequently, insurers are looking for ways to digitize, automate and take out costs. Of course, insurers must solve these challenges in a market full of divestitures and consolidation activity.

How DXC Technology helps insurers

DXC Insurance for SAP offers insurers an integrated cloud platform with an enterprise data model that accommodates both structured and unstructured data and provides analytical insight down to the claims level. Our applications enable predictive analysis and present the information via SAP Digital Boardroom, a single-pane-of-glass interface that offers actionable insights.

By deploying SAP Digital Boardroom on top of a connected insurance cloud platform, you can reduce your financial closing times from days and weeks down to minutes. You improve the return on investment of your core insurance solutions and dramatically reduce your risk profile by pushing deep insights to the point of decision making.

Key benefits

- **Finance transformation.** Speed to close financials, manage strategic spend in claims and improve onboarding of agents
- **Predictive analytics.** Fraud claims avoidance, customer retention and churn prevention
- **Compliance.** Adherence to IFRS, U.S. GAAP and solvency requirements
- **Connected insurance platform.** Cloud platform and insight analytics for the connected home and loss prevention for extreme weather

Insurers also use this actionable data to better manage what they offer customers, and when, allowing for incremental, profitable growth. By partnering with the top global provider of insurance solutions — DXC has enabled some of the largest consolidations of SAP and non-SAP systems — insurers improve consolidation timelines by up to 40 percent and associated costs by up to 20 percent.

DXC Insurance for SAP — features

Today's insurers want to reduce costs, grow revenue and better connect their business so it remains agile. By extending DXC's core insurance solutions with SAP, e.g., through the SAP Digital Boardroom, DXC empowers your company with actionable insights into core claims and policy information.

DXC can help solve your compliance issues related to International Financial Reporting Standards (IFRS), U.S. generally accepted accounting principles (GAAP) and solvency requirements, while helping to improve your performance and profitability.

DXC has executed some of the largest global corporate consolidations, mergers and divestments on SAP in the past 5 years. We take an automated approach to analyzing, assessing and then executing a business roadmap for complex multinational organizations.

Digital Boardroom enables risk management, financial decisions

Through DXC's partnership with SAP, we extend our core insurance solutions around claims, billing and processing into the SAP Digital Boardroom — which pushes information to managers so they can make faster, more precise decisions.

DXC's integrated cloud platform on SAP S/4HANA allows insurers to manage risk and finance in a centralized, comprehensive way. Because the connected insurance platform is built with an enterprise data model that accommodates both structured and unstructured data, insurers can generate analytics that give them insight into, for example, connected homes and help prevent losses following extreme weather events.

Financial Products Subledger (FPSL) lets insurers transform the finance function and gain agility and speed to close financials on SAP S/4HANA. Your financial transformation can also provide depth in managing strategic spend for claims in Ariba, as well as efficiency in onboarding agents. We build a bridge to your general ledger through SAP's Financial Products Subledger (FPSL).

About DXC Technology
