

Plan your journey to a digital future

DXC Transformation Planning for SAP S/4HANA

DXC can help you define your journey to a digital enterprise with SAP S/4HANA based on automated assessments combined with expert sessions addressing your business priorities and needs.

Benefits

- Clearly understand the value of moving to SAP S/4HANA
- Discover the best path to digital transformation, whether cloud based or another solution
- Gain access to automated tools that speed up digital transformation
- Extend the digital reach of SAP systems to enable improvements in products and services
- Maximize value and minimize cost through flexible advisory solution options

Enterprises are challenged to find the best ways to innovate in an app-driven culture and process petabytes of structured and unstructured data across literally millions of devices, sources, sensors and things. Supporting new business models and processing larger data volumes is difficult; however, the pace of business change is accelerating. Business stakeholders are demanding more, and core Enterprise Resource Planning (ERP) software, in conjunction with off-the-shelf software-as-a-service (SaaS) solutions, must deliver.

Creating a scalable platform that adds business value

DXC Technology has developed an advisory service that enables organizations already using SAP software to understand the value of moving to S/4HANA to achieve digital ambitions, and to determine the best way to transform the enterprise. DXC's service uses automated analysis tools to enable our teams to start quickly, minimize time spent asking questions about the "as is" situation, and provide a balanced view of why, when and how to proceed. We use an open-minded approach to consider your existing SAP systems, what processes should be executed in a core ERP system, business objectives, potential benefits, costs and the migration options. Our solution is flexible and scalable to meet your business needs.

Transforming your business with SAP S/4HANA

SAP S/4HANA enables business users and customers to interact more easily and flexibly with business processes. It is a major change to SAP ECC [ERP Central Component], however organizations must make the transition by 2025. DXC has helped many enterprises transition to S/4HANA. Some of the benefits of making this transition include:

- **An agile and scalable platform**
DXC helped an Aerospace & Defense (A&D) organization define a roadmap for converting an existing SAP system to a new S/4HANA solution, adding new intuitive transactions for shop-floor users, and creating a platform that can be extended to other divisions.
- **Risk avoidance and cost savings**
DXC mapped the journey for a consumer packaged goods organization from an old version of SAP R/3 to S/4HANA, moving it to a private cloud service infrastructure and delivering a major transformation of the IT landscape to a cheaper and more flexible model.

Why DXC?

- 1. End-to-end SAP coverage.** With full life-cycle capabilities across the Advise, Transform, Manage and Optimize phases, as well as a range of hosting options, DXC provides comprehensive transformation options.
- 2. Accelerate time scales.** DXC uses tools and accelerators to ensure that S/4HANA analysis is delivered quickly and that subsequent projects generate rapid business benefits.
- 3. Enable new business models.** DXC can extend the digital reach of your SAP systems, both for internal employees and for your products or services, combining systems of record with systems of engagement.
- 4. Solve complex problems.** DXC forms long-term relationships with its clients, and we aim to deliver visionary solutions to solve complex challenges with an achievable delivery path.
- 5. S/4HANA leadership.** DXC has not only kept up to date with the development of HANA and S/4HANA, but we have worked together with SAP to deliver some of the earliest projects — from Business Warehouse (BW) on HANA to some of the first migrations of clients to S/4HANA systems.

Delivering agile solutions

DXC's SAP S/4HANA Transformation Planning advisory is most relevant to organizations that run customized and wide-scope SAP solutions on ECC6 and are unsure whether SAP S/4HANA is the right solution for their future needs — or perhaps have not yet found a clear business case.

Transformation must be delivered in an agile manner, and our approach is to identify the end state and create a transformation plan that's flexible, focusses on your business objectives and long-term strategy, and aligns decisions and recommendations to your overall vision.

Benefits of our approach:

- Tools and templates avoid the need to use valuable face time with business representatives while asking them to explain what they do.
- Our assessment of the technical feasibility of an SAP conversion (versus greenfield) factors into the business process changes clients are seeking.
- We provide an actionable plan with clear answers, rather than creating complex next steps that require more consultancy services.

Trust an experienced partner

DXC's advisory service considers the client's existing SAP systems, business objectives, potential benefits, costs, timing and migration options. DXC uses automated analysis to enable our teams to start quickly, minimize time spent asking questions about the as-is situation, extrapolate to the future solution and provide a balanced view of why, when, and how to proceed with SAP S/4HANA.

- SAP Certification for 10Steps2S4 Installed Base Conversion Program
- SAP Qualified for SAP Model Company
- SAP Qualified Partner Package Solution
- SAP Certificate – Application Operations for SAP S/4HANA
- DXC has completed more than 50 S/4HANA assessments
- Integrated network of 25 global Centers of Excellence (COEs)
- DXC delivered more than 1,000 SAP implementation projects, SAP upgrades, and migrations over 30 years of partnership
