

Redefine productivity for your workforce

Optimize operations and empower employees to realize their full potential with custom software

We need to assign global resources to optimize teams and maximize individual utilization.

Design the experience to meet specific business goals

We need help realigning our business processes for the digital age.

Innovative, adaptive solutions propel workforce productivity

- Understand desired employee experiences
- Define desired business outcomes
- Evaluate current systems

Apply extensive experience to design solution to optimize workforce productivity

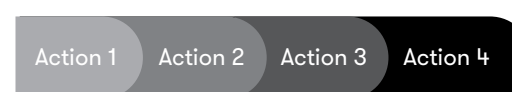

We are not getting the results we expected from our software.

Deliver the expected outcomes — and the means to measure

- Data
- Transactions
- Rules
- Workflows
- Integrations
- Other

Inputs →

Business processes that drive the desired outcomes

Effective software development requires professionals who understand how all inputs work together to achieve desired outcomes, while providing insight at every step.

Intelligent solutions to deliver maximum business value

Integrated
Connect productivity and line-of-business applications for efficient user experiences

Secure
Ensure there are no weaknesses in protection of corporate and personal data

Mobile
Deliver information, securely, to users where and when they need it

UX-optimized
Design user experiences to align with workflows and business processes

Business applications crafted with experience

The DXC Eclipse team has designed, developed and implemented hundreds of custom software applications and brings a wide range of development skills to the table. From database development and portal software to systems integrations and industry-specific applications, we provide solutions that streamline processes, fill functionality gaps and help our clients operate more efficiently.

Our clients depend on us for time-tested methodologies, sound development expertise, quality assurance and dependable support.
