

Delivering secure anywhere, any-device workstyles

DXC Technology and Citrix partnership

DXC and Citrix at a glance

- DXC is a Global Citrix Strategic System Integrator partner
- Citrix is a Gold Level participant in the DXC Partner Network Experience Program
- Industry analysts consistently rank both DXC and Citrix as premier market players
- There are more than 1 million Citrix virtualization users under management
- DXC awarded Citrix Innovation Award for Partners 2019, Global and Americas GSI Partner of the Year 2019 and GSI Cloud Accelerator of the Year 2019 by Citrix

About Citrix

Citrix (NASDAQ:CTXS) is powering a better way to work with unified workspace, networking, and analytics solutions that help organizations unlock innovation, engage customers and boost productivity, without sacrificing security. With Citrix, users get a seamless work experience, and IT has a unified platform to secure, manage and monitor diverse technologies in complex cloud environments. Citrix solutions are in use by more than 400,000 organizations, including 99 percent of the Fortune 100 and 98 percent of the Fortune 500. **Learn more at <https://www.citrix.com/>**

For many, work is no longer a place. It's an activity that blends in with the rest of our daily lives. It takes place wherever we happen to be, and we accomplish it with whatever device we have on hand. Work is accomplished in a digital workspace that delivers and manages the tools, desktops and data employees need to be productive.

To enable this workstyle, DXC Technology and Citrix offer solutions designed to work on premises or to leverage the cloud. This approach enables secure access to Windows desktops or specific Windows applications from anywhere, using any device. Citrix Virtual Apps and Desktops® powers the DXC MyWorkStyle Virtual Desktop and Applications (VDA) offering to deliver Windows, Linux, web and software-as-a-service (SaaS) applications, or full virtual desktops from any cloud — public, on premises or hybrid.

DXC VDA services reduce end-user support and management costs and improve data security by moving application and data management from endpoint devices into the data center. VDA also appeals to users by supporting diverse device options — iOS, Android, Macintosh, Windows and HTML5-compatible endpoints — and improving data center-based desktop and application performance.

Client benefits

The rise of cloud computing has given companies the option of discarding the traditional machine-based IT model and instead using virtual desktops and applications, which do not require the same level of maintenance or carry the same related costs. DXC and Citrix leverage the power of cloud architecture to deliver sophisticated digital workspace solutions that make

people and enterprises more secure and more productive, at a lower cost.

For clients, our cloud-based services offer seamless delivery of reliable, scalable and secure workstyle-driven solutions for Windows desktops, applications and data centers. Most importantly, our simple as-a-service model provides an effective platform for growth. Modular building blocks allow clients to quickly and cost-effectively scale the solution capabilities as business needs evolve.

Additional client benefits from our combined solutions:

Cloud choice. Clients can choose the cloud configuration that suits them best. They can have their workloads in one or multiple clouds and can also keep them, at least partially, on premises.

Security. DXC VDA services provide virtualized Windows/Linux applications and desktops from the security of a data center or from the cloud. Virtualized applications and desktops are accessible from a company's secure network or from the public internet, allowing users flexibility and security from their chosen work location with extensive device options, including the ability to use their own devices.

Self-service. Self-service capabilities, powered by integration with ServiceNow's automation tools, enable end users to request Citrix resources such as virtual desktops or apps. Administrators can automate provisioning, providing improved experiences for users. This greater degree of choice and control over how, where and when work gets done improves productivity and speeds business results.

Increased speed. Using DXC VDA services allows enterprises to provision virtual applications or the right number of virtual desktops to their users — typically using just a few types of configurations. This reduces the administration needed for each employee.

Ultimate aggregation. With Citrix, DXC MyWorkStyle is the one solution that gives users a compelling picture of all their applications. SaaS applications (managed or not), virtual apps and desktops (located on premises or in any public cloud), files (located on premises or in any public cloud) are aggregated in the same unified workspace.

Joint offerings/solutions

- DXC MyWorkStyle uses Citrix Virtual Apps and Desktops, Citrix Content Collaboration® and Citrix Networking®. These elements of the robust Citrix mobile solutions portfolio help create secure, people-centric, integrated, flexible desktop environments accessible by any device, over any network, on any cloud. Our approach provides a complete virtual app and desktop solution to meet business needs and give employees the freedom to work from anywhere while also reducing IT costs.

Citrix Virtual Apps and Desktops enables DXC MyWorkStyle VDA to deliver Windows, Linux, web and SaaS applications or full virtual desktops from any cloud — public, on premises or hybrid. DXC VDA services can decrease end-user support and management costs while increasing data security by moving it from endpoint devices into the data center. VDA significantly increases user flexibility and productivity. It includes support for iOS, Android, Macintosh, Windows and HTML5-compatible endpoint devices, and also provides users with diverse device choices and improved data center-based desktop and application performance.

- Collaboration is the keystone of today's workstyle, which means employees and partners need access to enterprise data and files anywhere, any time. Citrix Content Collaboration is an enterprise follow-me data solution that enables IT to deliver a robust data-sharing and sync service that meets users' mobility and collaboration needs plus the enterprise's data security requirements.
- Citrix Networking provides reliable user access to key productivity apps — such as collaboration tools — in hybrid and multi-cloud environments, protects your web access and infrastructure with a people-centric approach to security, and enables full visibility and insights through intelligent analytics.

Differentiation

Working together with Microsoft and other key industry leaders, DXC and Citrix take a holistic, people-centric approach to desktop and application delivery. We deliver desktop virtualization and mobility solutions that increase agility and accelerate business — drawing on leading technologies, rigorous methodologies and decades of experience.

To create highly effective, integrated and personalized solutions, we address strategy and planning, infrastructure and architecture, deployment and execution, and maintenance and operations.

The three-way partnership between DXC, Citrix and Microsoft is unique. Citrix is the only vendor to partner with Microsoft to provide virtual desktop services. DXC has a tight relationship with Microsoft and is providing Microsoft Azure solutions for Citrix Virtual Apps and Desktops.

Our combined experience proves that there is no effective one-size-fits-all approach to desktop virtualization. We apply disciplined methodologies, an extensive portfolio of intellectual property and broad experience in managing millions of desktops to help clients and their employees work effectively and efficiently in today's mobile, digital workplace.
