Improve the GDPR compliance capabilities of your Oracle Applications
DXC GDPR Services for Oracle Cloud

Automate data extraction for individuals from Oracle Applications to reduce the financial and resource burden of GDPR compliance

Benefits

- Improve GDPR response consistency by automating data extraction

- Comply with GDPR rights of the individual with a scalable, reliable and secure solution

- Validate actions and demonstrate compliance to meet audit requirements

- Implement a solution immediately without the need for in-house skills or hiring new employees

GDPR requirements present many challenges

GDPR has increased the accountability of every organization holding and processing the personal data of EU nationals. It has imposed on companies the responsibility to always demonstrate compliance and be more accountable for the security, accuracy and relevance of personal data. In addition, organizations are responsible for the proper access, regulation and communication of personal information. All these considerations need to be incorporated into future internal processes.

Many organizations are challenged with implementing the necessary systems and processes to manage the immense amounts of data being collected and stored. In many cases, organizations do not even know what data is being held and where it is stored. They may also be holding more information on data subjects than is allowed under GDPR and do not have the in-house skills to develop an appropriate response to the regulation and need to rely on manual intervention.

Preconfigured solution for meeting GDPR challenges

DXC Technology's GDPR Services for Oracle meets these challenges by providing an automated, standard solution that pulls the required data together without the need for manual intervention.

The solution allows you to generate a Personal Details Report that contributes to the demonstration of GDPR compliance. The tool is a preconfigured, automated solution that can be run on demand to extract relevant data, alleviating the need to manually pull together the data.

The solution also lets you gain access to data held in user-defined fields, custom tables and industry-specific or specialized modules within the wider suite of Oracle Applications. Combining this preconfigured solution with DXC's advisory services including data discovery, data anonymization, roles and access reviews, ensures all business needs for GDPR can be addressed.

Automating GDPR compliance

To comply with GDPR, all organizations holding or processing personal data need to demonstrate that the data is accurate and is only being held for purposes consented by the individual. DXC's solution provides the following value:

- **GDPR compliance support** — The Personal Details Report helps demonstrate compliance, showing that a process has been put in place and a high volume of requests for personal data can be responded to within 30 days.

- **Automation and standardization** — Automation of the reporting process produces consistent results and minimizes the amount of manual

intervention required, as well as reducing the need to recruit additional staff to support GDPR regulations.

- **Rapid reporting** — Running large numbers of reports during working hours can impact system performance as it copes with high traffic volumes and the processing power required to generate reports. Scheduling this activity for off-peak periods minimizes these impacts but leaves the option to run on demand when required.

Why DXC?

1. **Partner alliance** — DXC has been an Oracle partner for over 30 years, is currently a Platinum Partner and Cloud Select Partner and part of the Oracle Cloud Excellence Implementer (CEI) program.

2. **Expert Oracle capability** — DXC has a global team of 9,000+ certified Oracle experts to advise, deliver and support Oracle solutions.

3. **Comprehensive** — DXC offers a comprehensive GDPR solution for Oracle including the Oracle Fusion Middleware and application tool kits.

4. **Speed to value** — DXC's preconfigured DXC Oracle Toolkit includes questionnaires, configuration workbooks, test scripts and automation, and provides a consistent, repeatable approach to accelerate cloud migration and deliver business results in weeks, not months.

5. **End-to-end solution** — DXC has a complete range of specialized capabilities including Security, Digital Transformation, Consulting and Business Process Services to complement our Oracle capabilities.

Extract data on request with a Personal Details Report

To meet the growing demand from individuals to know what personal details organizations hold, our solution provides the ability to generate a Personal Details Report. The report is a preconfigured solution generated by extracting an individual's data from Oracle Applications. Because the report is prebuilt, it will not require your scarce resources to be diverted from current activities. Data can be quickly extracted by defined fields for customers, employees and supplier contacts. To complement the extract, a report is provided to interrogate audit data at different levels of detail for reporting in to the management chain. The solution provides a standardized process to ensure that all activities are carried out to the same level of competence and completion.

Comply with GDPR quickly and cost effectively

The Personal Details Report provides a cost-effective solution to assist with the complexities of compliance to GDPR

regulations. Implementation can be immediate, and you will be quickly ready to better comply with the new regulations. DXC provides the expertise to work with you to identify all the fields that hold personal data and update the report to accommodate this information. The report reduces the need to develop a solution in house or recruit new skills to fill the talent gap. The audit report provides the ability for Data Protection Officers to validate actions taken and prove to external audits that the company is applying compliance processes. The solution gives you the ability to meet high demand for data extraction and minimizes the manual work to achieve performance efficiencies.

Take the next steps

Contact DXC's Oracle Practice to start your journey to GDPR compliance with an assessment of personal data held and where this data is stored in your Oracle Applications.

See how the Personal Details Report can quickly identify the unique information of your data subjects for extraction, reporting and auditing.
