

Optimize today's workforce with digital transformation

DXC Technology and Hewlett-Packard strategic partnership

DXC and HP at a glance

- Partnership built on a shared history, commitment to innovation, and strong working relationships with mutual clients and each other
- Integration of DXC's business solutions and services for data management, cloud, security and mobility with HP's portfolio of printers, copiers, laptops and related services to accelerate digital transformation by optimizing the productivity of the enterprise workforce
- HP's proven leadership in PCs and printers, with built-in security, made even stronger when coupled with DXC's cybersecurity services

About HP

HP creates technology that makes life better for everyone everywhere. Through its portfolio of printers, PCs, mobile devices, solutions and services, HP engineers experiences that amaze. Learn more at www.hp.com.

As more and more businesses embark on digital transformation journeys, one thing is clear: The most successful evolutions transform every facet of the enterprise — from the data center to the business' most critical systems, to the teams of people that support the business. Together, DXC and HP provide a path that takes digital transformation to the individual, ensuring that each user has the best possible experience while creating the flexible, mobile and secure work environment that matches the demands of the business. This gives the enterprise the information it needs, along with the right equipment, technology, processes and people to provide a successful digital transformation from end to end.

Client benefits

DXC Technology was created by the merger of Computer Sciences Corporation (CSC) and the Enterprise Services business of Hewlett Packard Enterprise in 2017. Their shared history has helped to forge a strong bond and synergy that is unique among partner relationships. Working together to join the power of market-leading solutions from HP with best-in-class services from DXC brings several unique benefits to clients:

- A like-minded vision to create technology that helps our clients transform their businesses
- Interoperability of systems that drives efficiency and alignment
- Strong, long-standing relationships, with shared clients and with each other, that have been built over decades of working together and that enhance our ability to support our clients

- A deeper level of security that starts at the hardware level and is extended through software security services

What does this mean for you? The unmatched experience, expertise and global resources of these two innovative, proven leaders will help you transform and propel your business into the future.

Joint offerings and solutions

A critical part of digital transformation is optimizing the productivity of the enterprise workforce by using the appropriate device for the person and the job, right-sizing the estate and having information available, secure and ready to use with efficient monitoring and processes in place for device sustainability, scalability, end of life and more.

- **Workplace & Mobility.** HP's products, along with offerings such as Managed

Print Services (MPS) and device as a service (DaaS), enable clients to design a work environment where people collaborate fluidly, regardless of location, and where systems recognize and assist users in adaptive, intuitive ways.

There is a natural alignment between DXC MyWorkStyle and new devices from HP that empower people and enable productivity. With a wide variety of advisory, mobility, application and management services, DXC will help develop a robust client roadmap that couples HP solutions with complementary services to transform the enterprise, addressing today's consumption and technology shifts with scalability as needs change.

- **Everything as a service.** HP DaaS options provide a flexible consumption solution that shifts asset costs from CAPEX to OPEX. DXC offers services, including asset transfer options, to ease the transition to the new financial model while facilitating a company's digital transformation. Managed Print Services (MPS) is a comprehensive outsourced print service combining innovative devices, solutions and business intelligence. With the expertise of DXC Technology and HP, MPS delivers measurable business results by simplifying IT ownership, support and management, which helps predict costs, reduce capital expenses, enhance security, increase uptime and scale the print environment as business evolves.
- **Security.** Best-in-class security for the enterprise combines DXC Cyber

Security Services with the embedded capabilities delivered by solutions from HP. Only HP offers a combination of security features that can monitor to detect and automatically stop an attack, then self-validate software integrity in a reboot for PCs and printers. These security features provide a clear, recognized competitive advantage in security across all devices, protecting data from visual hacks, malicious attacks while browsing, BIOS attacks and attacks while printing sensitive documents. HP security, coupled with DXC's services, enable clients to enjoy an unparalleled commitment to security and a higher level of protection across the digital enterprise.

- **Transformation with Windows 10.** Migration and business transformation solutions and services help clients move to and optimize the value of the future workplace now.
- **Industry solutions.** HP and DXC provide specific solutions that are using technology to help businesses compete in new ways across a variety of industries, including healthcare, manufacturing and the public sector. For example, HP 3-D Printing Solutions, coupled with DXC Manufacturing Digital Operational Excellence services, are transforming manufacturing with their unique design and rapid product development/prototyping, along with enhanced potential for flexible production and related manufacturing capability.

In the public sector, HP solutions such as the X3 device are enhancing "blue-light" services from police, firefighters and medical professionals who are better equipped to respond to emergencies with high-definition cameras, recordings and biometric security that help capture and retain important information for sharing and analysis. There are many other examples in manufacturing, the public sector and other industries where DXC and HP are helping organizations shift to a more secure, agile, mobile-ready future.

Differentiation

Together, DXC and HP help clients drive a digital transformation by delivering innovation in products, solutions and services. With HP, DXC offers a focus on the people part of the equation; together, they put processes and solutions in place at the user level that complete the digital transformation throughout an enterprise and ensure that the workforce can be successful because the right people have the right information, devices and processes.

With DXC, solutions from HP are easily integrated into businesses, providing the right devices and services needed to make everyone in the business more productive, and allowing convenient access to information when and where it is needed. From the data center to the end user, combining the business and technology expertise from DXC with leading solutions from HP provides the performance and support businesses need for now and for tomorrow.

About DXC Technology

DXC Technology (DXC: NYSE) is the world's leading independent, end-to-end IT services company, helping clients harness the power of innovation to thrive on change.
