

Leverage open source software to modernize and transform your applications

DXC Technology and Red Hat partnership

DXC Technology and Red Hat partnership at a glance

- DXC's world-class industry and solutions expertise, combined with Red Hat's complete open-source product portfolio, helps enterprises accelerate the modernization of their applications using a best-in-class managed services model.
- DXC is a Premier Partner and Certified Provider for Red Hat.
- As partners for more than a decade, DXC and Red Hat provide a powerful synergy that spans the globe, with teams in 70 countries.

About Red Hat

Red Hat is the world's leading provider of enterprise open source software solutions and services, using a community-powered approach to deliver reliable and high-performing Linux, hybrid cloud, container, and Kubernetes technologies. Red Hat helps customers develop cloud-native applications, integrate existing and new IT, and automate, secure, and manage complex environments. Learn more at <http://www.redhat.com>.

The DXC Technology and Red Hat partnership combines DXC's vast global reach and expertise in delivering enterprise-level solutions with innovative technologies developed by Red Hat, the world's leading open source software provider. DXC has partnered with Red Hat to deliver open source solutions at scale — connecting and integrating data, devices and applications across the enterprise to enable digital transformation.

Our partnership focus is to help businesses modernize and transform their enterprise applications by moving them to Red Hat platforms, while leveraging the intellectual property and innovations from Red Hat and DXC. Together, DXC and Red Hat have created a unified, integrated, hybrid cloud capability for operating workloads across a variety of infrastructure environments.

Client benefits

Red Hat and DXC are closely aligned to build, sell and deliver a repeatable cloud platform as a service (PaaS) that provides developers and IT organizations an agile means for deploying new applications on secure, scalable resources with minimal configuration and management overhead. We do this via our Application Transformation Factory for Red Hat, which modernizes and transforms applications to PaaS environments using Red Hat technologies.

The benefits include:

- **Access to technology expertise.** DXC's certified Red Hat platform specialists can help enterprises integrate and deploy applications on multiple public, private or hybrid clouds.
- **Faster time to market.** Using container technology, we accelerate application and infrastructure

provisioning, which reduces the time for new projects and increases revenue opportunities for your IT and DevOps teams.

- **Improved service performance.** Containerization means developing new applications faster, with higher reliability and better performance. It also results in fewer errors, increased scalability and improved services in areas such as DevOps and business operations.
- **Managed services.** DXC provides a wide range of managed application services to operate complex business solutions on a large scale. Using the latest Red Hat technologies, these services are architected for enterprise-grade high availability, and include automating application builds, testing, deployment, patching and performance reporting.

Joint offerings/solutions

To help enterprises improve operational efficiencies, reduce operating expenses and transform their application landscape, DXC and Red Hat offer innovative joint solutions, including:

DXC Managed Container Platform as a Service Powered by Red Hat OpenShift:

Build, deploy and manage containers at scale for running legacy or cloud-native enterprise applications. This fully managed service for the Red Hat OpenShift Container Platform features built-in operational management that automates the building, testing, deployment and scaling of applications. Enterprises can automatically scale out this service, which uses the latest Red Hat technologies, via a self-service portal to support changing business needs.

DXC Application Containerization as a Service (aCaaS) with Red Hat OpenShift:

Leverage DXC and Red Hat's extensive intellectual property to automate the containerization process. Discover a full range of services, such as an applications assessment and preparation of deployment configurations, while gaining access to mature DXC factory lines and tools for refactoring. Services include the deployment, monitoring and management of containers with the ability to automatically scale application capacity to meet demand.

Workplace and mobility platform using Red Hat OpenShift:

Empower employees and improve workplace productivity by enabling consumer-like experiences and the ability to work at any time from any location on any device. By leveraging Red Hat OpenShift, we can help your enterprise provide a next-generation work environment enhanced by managed, provisioned software services.

Application Integration Services with Red Hat JBoss integration portfolio:

Support all stages of planning, implementing and operating application program interface (API) management and application integration. DXC and Red Hat provide the enterprise, industry and technology expertise to deliver solutions that interconnect with your application development and management life cycles and are aligned with your business operations. The Red Hat JBoss enterprise integration and 3scale API management platforms deliver enterprise-grade security, performance and scalability in any environment.

Differentiation

The DXC and Red Hat partnership combines DXC's enterprise perspective and deep industry expertise with Red Hat's powerful open source solutions. DXC has a large global presence in cloud and enterprise applications and the ability to deliver digital transformation at scale.

Clients can benefit from the synergy provided by DXC's cloud expertise and ability to host applications in our global data centers and in public clouds such as AWS and Azure, combined with Red Hat's industry-leading open-source technologies.

Through our partnership, we maintain unique resources available to our clients, including early access to Red Hat software releases. Our resources include the DXC Application Transformation Factory for Red Hat and the DXC Center of Expertise on Red Hat Platforms, both of which help enterprises tap into Red Hat innovations to enable rapid and flexible application deployments. DXC also provides training in Red Hat solutions, tools and approaches through a scalable training model that can include classroom or web-based training.

Our joint intellectual property and expertise in areas such as automation, mobility and cloud optimization can help you develop and deliver cost-effective solutions. Together, we employ unique capabilities that deliver trusted, proven solutions at every point of your digital transformation journey.
