

# Close collaboration yields integrated solutions for the digital journey

## DXC Technology and Micro Focus strategic partnership

### DXC and Micro Focus at a glance

- Recognized industry leaders offering a comprehensive portfolio of end-to-end solutions that help clients achieve measurable business outcomes
- Deep industry experience and a long history of joint development that results in tightly integrated solutions with rapid delivery
- Ongoing, aggressive investments in solution development that assure clients' continuous improvement and innovation

### About Micro Focus

Micro Focus specializes in building, selling and supporting software. This single-minded approach puts customers at the center of innovation, enabling the company to deliver high-quality, enterprise-grade, scalable software. Micro Focus helps customers bridge old and new technologies by maximizing the return on investment of existing software investments and enabling innovation in a new hybrid model for enterprise IT.

The journey to a digital enterprise means finding ways to effectively leverage and transition a large portfolio of legacy IT solutions. The DXC Technology and Micro Focus global strategic partnership enables our clients to complete the journey successfully by addressing key areas in applications modernization, security, analytics and information governance. The long and close relationship enables DXC to develop solutions that are tightly integrated and can be rapidly developed and delivered. Together, we help organizations worldwide transform their IT and business processes to reap the benefits of a secure, productive and profitable digital future.

### Client benefits

DXC and Micro Focus combine their strengths to help companies accelerate the move to a modern digital core — the essential element in realizing strategic goals such as developing new customer-friendly services, unlocking data from older applications and building a foundation that supports continuous business transformation.

Every solution we create, build and offer to the marketplace must be measured by the business outcomes it helps our clients achieve. Our joint portfolio offers a single source of end-to-end solutions that make effective results possible. Companies can expect to:

- Realize improvements faster and with less risk
- Make business decisions more quickly by accessing real-time data

- Secure critical corporate assets through improved governance models and policies
- Gain access to continuous innovation from our ongoing investments in solutions and services

### Joint offerings/solutions

**Application services:** Every company achieves its position in the market in its own way, which means the journey to a digital future follows a different path for each company. Our solutions help develop a clear, comprehensive roadmap to that digital future.

Moving applications to a modern cloud environment is a big milestone in the digital journey that needs to be undertaken with a clear vision, diligent planning and flawless execution. We guide companies in developing a holistic modernization strategy that moves legacy applications and workloads

to the best combination of private and public cloud architectures for their unique needs. We show clients how to improve their development processes and testing protocols. And we provide solutions to manage their new, rationalized application portfolios more efficiently and effectively.

**Security services:** Consumers, aware of the value and vulnerability of their personal data, are pressuring companies and governments to protect sensitive information with new safeguards. The European Union's General Data Protection Regulation (GDPR) is only the latest example of the increased need for a comprehensive, forward-leaning approach to system and information security. To help companies ensure GDPR compliance, DXC and Micro Focus have collaborated to offer practical solutions.

Our experienced professionals are also available to conduct an in-depth survey identifying advanced persistent threats. Applications Security on Demand, a new joint offering powered by Micro Focus Fortify, examines application portfolios to flag potential security vulnerabilities. Our security monitoring solutions also utilize the dynamic combination of ArcSight and Vertica-powered analytics from Micro Focus to afford companies valuable time for corrective action before a breach occurs.

**Predictive analytics:** Companies with a high "analytics IQ" already outperform peers in their respective industries. That gap will only widen as modernization projects, sensor data from internet of things (IoT) devices and the move to a digital core generate more data for those companies to turn into a competitive advantage. DXC and Micro Focus offer analytics platforms and services that rapidly provide forward-looking insights and accelerate the digital transformation journey. Our robust solutions for structured and unstructured data enable companies to leverage existing investments while building the analytic solutions of tomorrow.

**Cloud platform services:** Our solutions help companies transform to a hybrid infrastructure and make the most of private and public cloud environments, as well as legacy infrastructures. Our proven services securely move the right workload to the cloud and rapidly modernize and integrate applications. In addition, we help companies further improve their return on technology investments when leveraging our shared operations management and cost-advantaged data centers.

## Differentiation

In today's complex IT environment, experience counts. DXC and Micro Focus have a long legacy of jointly engineering and delivering integrated, seamless solutions for our clients. Our joint business objectives, mutual investments, co-development efforts and ability to scale help our clients harness the power of technology to transform their businesses. The breadth and depth of our portfolio and the range of solutions we provide reflect what a mature partnership can achieve.

DXC and Micro Focus are both recognized for visionary, responsible executive teams that garner regular industry recognition and achieve solid financial performance. Micro Focus is the seventh largest pure-play software company in the industry, with \$4.4 billion in annual revenues. DXC is the world's largest independent software integrator, with over \$25 billion in annual revenues and 155,000 employees serving some 6,000 clients in more than 70 countries. These attributes ensure that our clients will continue to benefit from our ongoing, aggressive investments in our partnership and products, driven by a relentless desire to help our clients succeed.
