Counter evolving threats with proven security solutions
DXC Technology and Symantec partnership

DXC and Symantec at a glance

- Symantec is a Solution Partner within the DXC Partner Network

- 2 million seats of endpoint and email security services

- 1 million seats of risk, compliance and data loss prevention services

- 10 years of working together to deliver web security services

- 20 years of working together, serving the world's largest organizations

- 5,000+ security professionals delivering DXC security services

- Now embarking together to secure The Cloud Generation

About Symantec

Symantec Corporation, the world's leading cyber security company, helps organizations, governments and people secure their most important data wherever it lives. Organizations across the world look to Symantec for strategic, integrated solutions to defend against sophisticated attacks across endpoints, cloud and infrastructure. Likewise, a global community of more than 50 million people and families rely on Symantec's Norton and LifeLock product suites to protect their digital lives at home and across their devices. Symantec operates one of the world's largest civilian cyber intelligence networks, allowing it to see and protect against the most advanced threats. Learn more at https://www.symantec.com/

As the volume and sophistication of threats against information assets grow, security has become a skill that requires increasing specialization and full-time attention. Risk profiles continue to evolve and change as clients move from in-house to cloud-based infrastructure. Organizations face a growing burden of regulatory control requirements. And the complexity of dealing with all of these factors means that few organizations have a clear understanding of their complete risk profile.

Working together, Symantec and DXC Technology help clients assess their current cyber security maturity and posture, and we recommend ways they can achieve and maintain resilient businesses. We provide solutions and services to protect business interactions, safeguard critical information and IT infrastructure, and optimize security and compliance policies to identify threats and protect organizations.

Client benefits

Security solutions from DXC and Symantec offer clients an effective response to today's complex security challenges. Organizations around the world rely on our global scale and experience to gain control and visibility over the use of key web applications. By using a shared service, clients are protected at a lower cost than by using in-house solutions. They also benefit from continuing service updates. Our solutions help clients:

- Protect critical data from end to end and understand current data loss risks

- Minimize risk of exposing and disseminating confidential company information

- Comply with regulatory requirements by demonstrating adherence to security policies

- Define a data protection strategy for securing additional cloud applications and services

- Build a strong relationship with a trusted security expert that understands your business and offers sound advice

- Gain visibility and contextual awareness of active threats

- Reduce business risk of security compromise through faster containment

- Protect against targeted threats and advanced malware for continuous confidence

Joint offerings/solutions

Together, DXC and Symantec have developed a broad range of security, risk assessment and loss-prevention solutions to help organizations work effectively around the globe with partners and employees while securing critical data assets. As needs change, our solutions are constantly updated, revised and reinvented to offer your organization state-of-the-art protection.

Security risk management.
Cyber security threats change from minute to minute. That makes it nearly impossible for organizations to develop a clear understanding of their exposure. Security risk management helps companies develop resilience against current and future threats. It provides organizations with expertise to help assess their risk, formulate a strategy to deal with it
and implement risk management and monitoring capabilities.

Cloud access security brokering (CASB). Evolving threats aren't the only change that can affect your risk profile. Organizations transitioning to the cloud are undergoing significant changes as well. CASB gives you visibility into threats and the security risks of using cloud application environments and software as a service. As an independent provider, we can advise, transform and manage your environment, offering compliance reporting and incident response.

Data protection and privacy for DLP (data loss prevention). Information is the lifeblood of your organization, and every step possible must be taken to prevent its loss. DLP provides better visibility and control into how critical information is handled and identifies what must be done to secure it. We deliver this managed service remotely, using teams that design, implement and manage the protection of critical data.

Identity and access management.
Today's workers need the flexibility to work anywhere, any time. How do you give them the access they need with the control and security you require? Identity and access management provides control and visibility of users and their access privileges, improving overall security posture. These services include account provisioning, governance and compliance tools, authentication tools and privileged account/password policy solutions.

Infrastructure and endpoint security.
Threats don't arise exclusively from outside attacks. Multilayer protection solutions, such as our infrastructure and endpoint security monitor, detect and protect your environment from outside and inside threats.

Differentiation

For more than 20 years, Symantec and DXC have worked together to provide technology solutions and services that enable organizations to secure and manage their most critical information. Our partnership delivers leading solutions in data protection and backup, endpoint security and compliance, data loss prevention, data storage and availability, email cloud services, email content monitoring, and IT systems and IT service management.

This enduring and successful partnership serves clients in many different industries, enabling them to work collaboratively and securely with partners, employees and customers around the world.
