

High-performance network services designed for next-generation solutions

DXC Technology and AT&T strategic alliance

DXC and AT&T at a glance

- Unique business model combines a world-class systems integrator and a world-class network services company to create market-ready offerings for global deployment at scale.
- AT&T global network services and infrastructure, integral to the DXC portfolio, form the foundation for transforming delivery of application, workplace and cloud-based services.
- AT&T manages DXC's internal network and commercial client network services portfolio for combined global scale.
- Joint next-generation delivery uses software-defined networking (SDN) and network functions virtualization (NFV) to improve network performance at a price competitive with commodity network providers.
- DXC's comprehensive operating model integrates people, processes and tools management across the entire infrastructure ecosystem.

About AT&T Business

AT&T empowers business transformation by connecting the new digital ecosystem with an integrated, on-demand network experience. AT&T fuels business transformation through integrated solutions that tap into the power of everything that is connected. Connectivity is the core of everything businesses need to be successful today and in the future. And AT&T approaches connectivity differently. AT&T can deliver a set of collective capabilities that together establish a dynamic, highly-secure, on-demand network platform.

DXC Technology, the world's leading independent, end-to-end IT services company, and AT&T, a leading provider of high-quality network infrastructure products and services, together enable next-generation technology solutions for enterprise businesses.

DXC's systems integration and digital transformation experience, cloud and workplace services, specialized consulting capabilities and applications expertise complement the broad range of highly secure, global network and cloud integration services from AT&T. Our alliance provides market-leading networking solutions across IT estates, enhanced network performance, global coverage and scale, a new path to innovation, and the ability to move quickly to the campus and cloud. Our combined offerings for next-generation data centers and campus networks are market-ready for global deployment at scale.

Client benefits

Next-generation technologies have created a virtualized context where network, platform and applications are indistinguishable to the end user, and enterprise IT now needs to manage comprehensively.

The broad range of global network services from AT&T, an integral part of the DXC portfolio, provides the foundation for effective delivery of application, workplace and cloud-based services. Comprehensive management capabilities integrate multiple cloud providers through a single DXC orchestration management portal powered by AT&T enterprise-grade network performance and control.

The strategic alliance offers a unique business model and combined global scale to help you benefit from digital transformation while maximizing the life span of your legacy infrastructure. Our combined world-class services portfolio helps you meet key business objectives, increase productivity, reduce complexity and drive down costs. We support the global management of applications across virtualized delivery environments and provide a consistent user experience with comprehensive SLA performance.

DXC also provides application expertise to AT&T and its clients. Working with AT&T, we modernize and migrate applications to deliver the benefits of a cloud environment and provide access to a global, highly secure network service that facilitates the development of next-generation applications.

Joint offerings/solutions

High-performance, competitively priced network services and agile hybrid cloud capabilities power the move to the cloud, hybrid solutions and workplace digital transformation.

- **DXC Managed Local Area Network Services** connect end users to enterprise resources and next-generation, location-based services from almost any device, at any time, from any location. DXC's system integration expertise and AT&T network infrastructure services deliver reliable and highly secure wired and wireless network connectivity.
- **DXC Managed Software-Defined Networking (SDN) Services** reduce time, labor and costs associated with buying, installing, configuring and maintaining network infrastructures. Virtualized and automated network capabilities based on SDN deliver immediate and lasting improvement to network performance at a price competitive with commodity-based providers.
- **DXC Next-Generation Data Centers with SDN** use the market-leading "spine and leaf" network design to provide a software-defined data center (SDDC) with the ability to rapidly and easily configure and secure a virtual infrastructure.
- **DXC Managed Connectivity Services** accelerate the flow of data essential for optimizing cloud resources in today's

increasingly global and mobile digital enterprises. Our services raise the bar in helping maintain performance quality, ensure highly reliable connectivity and manage security concerns across the network — while allowing you to use the transport providers you prefer.

- **DXC Managed Wide Area Network (WAN) Services** transform and manage network infrastructures to meet higher demands for global networked resources — including greater collaboration with customers and partners and increasing use of cloud services — while maintaining quality and security. WAN solutions enable efficient and nearly seamless communication to keep the business connected and to enable digital transformation with speed, efficiency and scale. These solutions span network architecture, life-cycle management, optimization and rationalization.
- **DXC Location Based Services** use Aruba's unique capabilities in IoT-enabled mobile engagement combining the Meridian platform, Bluetooth beacons and asset tags. The services enhance mobile applications with wayfinding, Blue Dot real-time positioning, location-aware push notifications and asset tracking functionality. In addition, the Aruba Analytics and Location Engine (ALE) links with analytics applications to give visibility into wireless networks' traffic patterns, workspace utilization and staffing efficiency.

Differentiation

DXC and AT&T have worked together for more than 20 years; more than 950 organizations around the world — including large multinational companies — rely on our domain expertise and next-generation delivery models for infrastructure, integration and modernization. Our alliance, with more than 4,400 dedicated professionals and access to an additional 16,000 network integration professionals, manages more than 25,000 enterprise routers, 66,000 WLAN access points, and 100 third-party transport carriers.

Companies generally see immediate and lasting improvement to network performance with our solutions. DXC has also experienced the performance benefits of pioneering an enterprise-level transformation to AT&T network infrastructure services. In addition to delivering DXC's Managed Network Services portfolio, AT&T now manages DXC's internal network. Moreover, this experience is contributing to the development and enhancement of AT&T network solutions.

As the network becomes an increasingly important component of next-generation cloud-based services, alignment with AT&T helps DXC enhance the quality of our services and better serve our clients. The ability to offer an enhanced level of service at a price that's competitive with commodity network providers means greater value and market impact for your business.
