

# Stop threats before they spread

## Managed Endpoint Threat Detection and Response

Identify endpoint threats that evade traditional security defenses and contain them in hours or minutes, not days.

### Benefits

- Guard against emerging threats with fast, flexible, fully managed solutions
- Improve incident response and hunting efficiency by 40 percent
- Detect advanced threats that evade traditional security defenses
- Augment human threat analysis in real time
- Continuously record centralized endpoint activity and automatically correlate it with extensive threat intelligence
- Remotely detect, contain and control compromised endpoints in hours — not days — without business interruptions

Although threat detection is nothing new, advances in malware and viruses are. When a door unexpectedly opens, today's attackers move in, staking claim to endpoints across enterprises worldwide. They lurk, undetected by traditional defense systems, until they suddenly spring into action, compromising networks at every turn. That's why enterprises need an innovative, real-time approach to hunting and quickly containing threats across endpoints.

### Flexible, fast and scalable

Now the next generation of threat detection has arrived. And with it comes faster, scalable and more flexible technology for protecting your endpoints and enterprise. But tools alone aren't enough.

DXC Managed Endpoint Threat Detection and Response gives your organization everything it needs to successfully battle today's invaders. Fueled by best-in-class technology and trusted DXC Technology security experts with unparalleled

knowledge of global threats, you gain a powerful threat detection and response solution — with options for every need:

- **Endpoint Compromise Detection.** Uncover advanced threats and adversaries by continuously recording endpoint activity data in real time, automatically correlating it with extensive threat intelligence and customizing detection policies according to your requirements.
- **Endpoint Compromise Response.** Protect your business with around-the-clock monitoring of indicators of compromise (IOC) alerts and the rapid deployment of approved containment actions.
- **Incident Response and Threat Hunting.** Prevent attacks specifically targeted at your environment, with custom IOCs built on recent security incidents and global, industry-specific threat intelligence. Optionally, conduct in-depth analysis of discovered threats.

### Defeat your adversaries

DXC Managed Endpoint Threat Detection and Response provides flexible, scalable solutions for protecting your endpoints and enterprise. Leveraging actionable intelligence on global threats from DXC's extensive network of clients and vendors, this service can control millions of networked and disparate devices. And DXC can ensure their safety and continued functionality by remotely detecting compromised endpoints and quickly containing intruders:

- **Identify the enemy.** DXC tailors hunts to your environment and industry to rapidly reveal advanced threats that evade traditional endpoint protection solutions.
- **Quickly defeat intruders.** To avoid waiting weeks for signature updates, DXC assesses your entire enterprise and contains and controls threats within hours — or even minutes — by applying machine learning and behavior-based technology that detect new stealth malware hidden in disparate endpoints.
- **Arm yourself with better information.** Flexible, customized reporting options provide a comprehensive timeline of endpoint activities that allows you to make informed decisions.

### Celebrate your victory

Using DXC Managed Endpoint Threat Detection and Response offers many benefits:

- **Proactive protection for your enterprise.** Our solution stops the spread of advanced malware and zero-day threats by remotely inspecting every endpoint and executing containment in hours or minutes —

without taking devices offline. DXC's granular approach stops intruders from damaging data and devices, helping you avoid significant losses.

- **Direct interaction with security experts.** Technology alone doesn't deliver value. When it is coupled with professional threat hunters who have extensive knowledge about global attacks, then you see tangible results, such as streamlined processes, decreased capital expenses and minimal downtime.
- **Global perspective.** Flexible, customized reporting options enable access to consolidated views of compromised endpoints and containment recommendations.
- **Positive return on investment (ROI).** Enjoy a cost-effective solution that is fully managed by security professionals who DXC estimates can increase incident response and hunting efficiency by 40 percent and save \$50,000 per in-house security employee (full-time equivalent).

### Why DXC?

- **Faster threat identification.** DXC delivers actionable intelligence that provides faster visibility into threats. This approach minimizes disruptions and decreases time from compromise to discovery and mitigation.
- **Global visibility of the evolving threat landscape.** With 24x7 monitoring across our network of Security Operations Centers (SOCs) on five continents, DXC has worldwide exposure to the evolving threat landscape, enabling our security experts to quickly identify and contain threats.

- **Worldwide delivery across industries and regions.** DXC has unparalleled threat intelligence and security insights gained from over 50 years of experience delivering end-to-end managed security services to industries worldwide.
- **Proven experience managing complex requirements.** Backed by leading technologies, the expertise of over 4,000 security professionals and platforms that process more than 300 billion events each year, DXC has a proven track record of driving results for diverse global organizations in demanding, complex environments.
- **Best-of-breed technology.** DXC applies best-in-class, scalable technology for real-time visibility, detection, investigation and forensics.
- **Market leader.** Industry analysts such as IDC and NelsonHall recognize DXC as a Managed Security Services market leader.

### Take the next step

Let DXC evaluate your organization's endpoint security posture, take a deep dive into your requirements and tailor a solution that perfectly fits your needs. Contact your DXC account executive or sales lead to schedule an assessment workshop. Or contact us at [www.dxc.technology/contact\\_us](http://www.dxc.technology/contact_us).
