

Get a better view of your security posture

DXC Cyber Maturity Review

Ensure an in-depth, business-level review of your organization's ability to protect assets, improve security practices and reduce business risk.

Benefits

- Assess your high-level security posture
- Engage senior stakeholders in security decision making
- Ensure an end-to-end assessment across people, processes and technology
- Learn how to prevent, detect, respond, manage and recover from an attack

Many organizations experience cyber attacks on a daily and even hourly basis, and the cost of breaches due to theft and malware is climbing. By 2022, the cost of cyber crime is expected to reach \$8 trillion worldwide, according to Juniper Research.

Can you be sure that your organization will respond to the next security challenge successfully? How will you react if you are breached? Will you be able to respond quickly and effectively?

To maximize the effectiveness of your security investment and protect what matters most, your organization should align security controls with the risks your data and information assets face. It takes a business-level approach to protect your company assets and intellectual property across your enterprise.

Align security to your risk appetite

To help you respond to these challenges, DXC Technology provides Security Advisory Services that deliver the best cost benefit for your business in line with your risk appetite.

DXC delivers two core reviews for enterprises that focus on different levels of maturity and deep-dive reviews to address targeted areas.

DXC's Cyber Maturity Review Foundation provides an introductory, high-level, open forum workshop engaging with

senior security stakeholders to provide an overview of the maturity of key cyber security essentials. This assessment is aimed at identifying a high-level security posture, quick wins and major areas of security concern.

DXC's full Cyber Maturity Review (CMR) provides a holistic, end-to-end appraisal across critical security elements, including people, processes and technology aimed at all levels of your business. This review is a comprehensive solution that supports cyber security improvement through quantitative gap analysis, allowing cost-effective decision making.

Deep-dive reviews

DXC has also developed critical subject deep dives that allow an organization to measure its maturity and preparedness for:

- The General Data Protection Regulation (GDPR)
- Cyber defense
- Identity and access management

Measuring your cyber maturity

DXC combines the industry-leading skills and experience of our security advisors with our innovative Cyber Reference Architecture (CRA) to help elevate cyber security in your boardroom and prepare your business to respond to cyber attacks.

The DXC CRA is a framework of strategies, tactics and capabilities that provides a common language, a consistent approach and long-term vision to help organizations align security strategies with the business and accelerate digital transformation.

We break down organizational activity into specific cyber security elements, which are positioned in 12 security domains that are structured into strategic, tactical and operational, and technical areas. This approach allows DXC to determine your cyber security maturity based on the industry-recognized standard, the Capability Maturity Model Integration.

At the beginning of the process, a maturity target is defined, and the resulting report provides advice on how the organization can improve to achieve this target. Industry-vertical benchmarks can be provided so you can see how you compare to your peers. DXC's Cyber Maturity Review brings awareness to the boardroom and articulates how an organization can prevent, detect, respond, manage and recover from an attack.

Versatility of review

We understand that the needs of every organization are different. What distinguishes the CMR from other security assessments is that it is not limited to technical controls and IT risks. DXC's flexible and pragmatic approach enables the assessment to be customized to address your specific business needs. It focuses on the organizational elements of people, processes and technology across your entire business. With a CMR,

you will get a comprehensive review of your organizational cyber security. Focus points include:

- The maturity of **Security Operations Center (SOC)** functions
- Your current capability to detect and manage attacks from **advanced persistent threats (APTs)**

Make informed business risk decisions

A DXC Cyber Maturity Review is delivered through a comprehensive and flexible portfolio of security services. You obtain:

- Cyber situational awareness, full visibility into your current security risk
- Reduced cyber risk exposure, a summary of maturity that delivers incremental improvements leading to higher levels of protection and puts you in control of events and incidents as soon as they arise
- Regulatory compliance, which includes adhering to national and international laws and regulations, plus industry-specific standards and frameworks

Key outcomes of the Cyber Maturity Review are security improvements that focus on areas where the greatest benefit will be achieved for the best return on investment.

Work with security experts

DXC Technology helps enterprise and government clients protect what matters. By understanding your critical operations and mission-driven needs, we work with you to ensure the secure

movement of information within and around your organization. We deliver integrated, innovative and trusted security solutions that are proven to manage business risk and maximize your investment in information security. Our highly experienced team includes:

- More than 4,600 security and privacy professionals worldwide
- Experts with a breadth and depth of security vendor technology certifications
- Consultants holding a variety of global IT and security certifications, including Certified Cyber Professional (CCP), Certified Information Systems Security Professional (CISSP), Certified Information Security Manager (CISM), Certified Information Systems Auditor (CISA), UK Commercial Evaluation Facilities (CLEF), Institute of Information Security Professionals (IISP), International Organization for Standardization (ISO) 27001 Lead Auditor, Payment Card Industry Qualified Security Assessor (PCI QSA), and more
- 10 cyber security centers worldwide to ensure local support

No matter where you are, or how big your organization is, we can help you protect critical information and processes while keeping your operations flexible, efficient and responsive.
