

Match your business risk with infrastructure security

DXC Infrastructure and Endpoint Security

Drive your organization's infrastructure and endpoint security improvement programs based on your unique level of business risk.

Benefits

- Implement an agile, efficient and cost-effective security infrastructure.
- Choose from our expansive services and broad base of market-leading third-party vendors.
- Reduce the impact on your IT staff's productivity with DXC security consultants.
- Optimize your return on security technology investment.
- Gain a successful, reduced risk implementation.
- Ensure a true alignment of security threat protection with your business risk.

New challenges and evolving threats

As cyber crime grows more sophisticated as well as more lucrative, security threats are becoming more complex and numerous. These threats, coupled with new stakeholder demands and growing public scrutiny, are causing many CISOs to struggle. Not only must these security officers stay ahead of the cyber criminals, but they must also address new and complex issues around compliance and regulations.

Further compounding their struggles are new threats empowered by the cloud, bring your own device (BYOD), social media and mobility. While these technology trends can be beneficial, driving innovation, growth and infrastructure transformation, they can also open up new cyber crime threat surfaces. Chief information security officers (CISOs) must react to these new threats constantly, making it harder for them to proactively manage their information security and risk strategies.

In this challenging environment, organizations need up-to-date and integrated security solutions that can protect their confidential information and data from ever-increasing threats. Ideally, these solutions are both cost-effective and conform to industry best practices. Unfortunately, many organizations lack the skills needed to

deliver these solutions. That leaves many CISOs — and their organizations — at risk.

Mitigate risk while maximizing business

DXC Technology provides infrastructure and endpoint security services designed to lower enterprise data and network risk, improve security protection, and enable business innovation and growth. DXC's services position you to reduce your cyber risk, implement security approaches successfully, optimize a return on your security investments and improve your infrastructure protection.

DXC Infrastructure and Endpoint Security Services support an agile, efficient and cost-effective security infrastructure. That means solutions meet your exact requirements, your IT staff is freed up to work on other high-value work, and your active business risk aligns with your security threat protection.

DXC consultants use industry standards and best practices to advise and assist in implementing a multipronged approach to identity, vulnerability and threat management. Your business outcomes may include fewer outages in production, clear separation of networks and duties to minimize production risks, and more efficient incident handling.

Our consultants can also review your security processes and artifacts and then design an architecture that mitigates risks, reduces operating costs and enables new business drivers and opportunities. You also benefit from our vendor-agnostic security solution advice and recommendations, deployment experience, best practice integration disciplines, and repeatable project methodologies.

To offer this compelling expertise, DXC either owns or partners with market-leading infrastructure security vendors. Our infrastructure and endpoint security services provide three main areas of protection:

- 1. Threat Resistance.** Your first line of defense provides protection against high-volume threats that include malware, spam, phishing, known vulnerabilities and hostile exploits:
 - **Managed Endpoint Protection** provides you with antivirus and antispayware, hosted firewall and intrusion-prevention services, and both application and device control.
 - **Managed Network Protection** reinforces your security measures with network firewalls, a virtual private network (VPN), proxy servers, secure monitoring with security information and event management (SIEM), and distributed denial of service (DDoS) attacks.
- 2. Threat Resilience.** Your second line of defense prevents a compromise from spreading throughout the organization and empowers you to recover quickly:

- **Managed Advanced Threat Protection** helps you correlate endpoint activity data with threat-intelligence feeds, record and store activity data, and provide 24x7 monitoring of detection alerts and more.
- **Managed Endpoint Threat Detection and Response** contains threats for in-depth investigation, provides deep-dive threat analysis and investigation, and empowers incident responses and remediation.

3. Digital Enabler. Your final line of defense shields your organization with an extra layer of protection to prevent breaches:

- **Digital Enabler Protection,** thanks to its low system footprint, enables business processes without compromising usability while providing transparent micro-virtualization and isolation capabilities, and employs machine learning to offer bulletproof protection.

To orchestrate these security services, DXC also offers a vendor-agnostic virtual single pane of glass to deliver near-real-time visibility, reporting and reaction to all security controls. It makes security visibility and operations seamless. It also boosts endpoint-security agility so you can adapt quickly to fast-changing business dynamics.

Rely on DXC expertise

DXC is a security leader with decades of operational experience across numerous organizations and industries.

- **World-class expertise:** More than 4,000 DXC security professionals worldwide leverage their deep cross-domain expertise to mitigate your security risks while enabling the business. Our professionals can work alongside your own security team members or supplement your staff to handle defensive surges at times of heightened threat.
- **Focused on your best solution:** DXC's vendor-agnostic approach means you'll get the best possible solution and technology for your unique security and risk profile. In addition, our consulting and support services — which include full global managed services — can help you align IT-infrastructure protection with your organization's level of business risk and budget.
- **Strong alliances:** To bring you the best possible solution, DXC supplements its world-class expertise with partnerships. We currently work with leading security providers that include Microsoft, Check Point Software, F5 Networks, Fortinet, McAfee and Symantec.

Take the next step

DXC offers you in-depth expertise on infrastructure and endpoint security solutions. Our experienced advisors can recommend the best path forward for your organization's security.
