Optimize defenses with proven threat prevention, detection and response

DXC Intelligent Security Operations

Protect your enterprise, safeguard critical assets, manage potential threats and increase enterprise visibility with world-class intelligent security services

As cyberthreats become more frequent and sophisticated, enterprises must find the best security solutions to prevent attacks, minimize impacts and aggressively respond to and remediate threats. Despite massive investments, security operations are failing to evolve as quickly as adversaries and confront four core challenges:

- **Cyberthreats** are more sophisticated. Cybercrime is one of the most lucrative ‘industries’ on the black market. CSIS estimates global cybercrime costs up to $600 billion annually.¹
- **Regulatory pressures** including new privacy rules are increasing cost and complexity.
- **Skills gap** is widening. Finding, hiring, training and retaining skilled employees is getting harder, with the job market for cybersecurity professionals facing ongoing shortages.
- **Security response** capabilities are key to protecting operations, IP and brand reputation. Quickly responding to attacks and adapting to the changing threat landscape are imperatives for effective enterprise security operations.

Intelligent security operations defend against evolving threats

DXC Intelligent Security Operations includes comprehensive advisory and managed security services to mitigate breaches and help you fully understand the threats you face. Our services range from threat intelligence, monitoring and threat detection to threat hunting and incident response, ethical hacking and vulnerability management, and executive protection services.

With a proactive approach, DXC provides the forensic and analytical skills - helping you deal successfully with complex security issues.

When a security event occurs, DXC uses incident-triggered analysis to determine the full extent of the breach. Incident responders and forensics experts enable a rapid response and minimal business impact, quickly locating any compromised device, containing the threat and rapidly returning you to normal operations 24/7/365.

To keep up with continuously changing threats, security operations must become intelligent, constantly adapting to counter adversaries. To support this DXC provides:

- Efficient incident detection and response. Our best-practice services provide defenses, detection and response to threats, minimizing the impact on your business, including breach-related regulatory fines and financial damage.
- Digital forensics specialists. We provide 24/7/365 forensic capabilities, ensuring minimal adversary dwell time.
- Security monitoring solutions. We help rapidly identify threats for all delivery models, whether in-house, hybrid or fully

outsourced. DXC’s Security Monitoring offers a comprehensive platform for detection, analytics, threat intelligence and expert analysts to give you the ability to access and assess your data in real time.

- Threat and Vulnerability Management solutions. We help you effectively identify, manage and mitigate vulnerabilities, enabling your enterprise to implement a vulnerability management strategy.
- Cyberattack simulation. This ethical hacking service resolves questions such as, “Could a threat group steal designs for our latest product?” or “Could an organized crime group identify our financial transfer process?”
- Threat intelligence and threat hunting services. Our specialized threat hunters help identify and target advanced threats and attacks, minimize downtime and prepare for improved responses.

**Access expert resources and methodologies**

DXC’s advisory-led model provides your enterprise with:

- Elite security operations professionals
- The vast knowledge of our strategists and deep technical specialists
- Support from 3500+ security professionals with deep specializations including penetration testing, vulnerability management, SOC analytics, forensic investigation and threat intelligence. DXC’s ethical hacking experts are accredited with the highest government and industry standards groups, including the Council for Registered Ethical Security Testers (CREST) and Certified Ethical Hacker (CEH).
- DXC’s proprietary threat intelligence and realistic simulation attacks, emulating threat actors that concern you most.

**DXC’s intelligence-driven approach:**

- Helps proactively find known threats and hunt unknown threats, enabling identification of threat actors who have penetrated your enterprise’s network.
- Ensures our experts apply specialize techniques, combined with DXC’s proprietary threat intelligence data derived from operating 12 SOCs and responding to scores of large-scale incidents annually.
- Employs behavior analytics allowing our experts to identify indicators of malicious activity and significantly reduce attacker dwell time, reducing the risk of data breaches.

**Rely on DXC expertise**

Partnering with DXC offers distinct advantages to help organizations compete in the digital economy including:

- Security professionals with deep specialities including SOC analysis, forensic investigation and intelligence
- Advisors with minimum of 5 to 10 years of experience at the highest security levels
- NSA-accredited expertise in Cyber Incident Response Assistance (CIRA) for the National Security Cyber Assistance Program (NSCAP)
- Forensic investigators experienced with civil and criminal digital forensic litigation
- A vendor-agnostic approach, which means DXC is not limited by any one technology but can work with best-in-class technology providers to deliver optimal security results

**Choose the best security partner**

With a global workforce of highly experienced security professionals, DXC is an industry leader in enterprise security. Our advisory-first approach reduces risk and our analytics drive advanced detection, so you can count on DXC for comprehensive security services with a flexible consumption model to meet your needs.
