

Enable the digital workplace of the future

DXC LAN Services for Aruba

Key benefits

The digital workplace is no longer a glimpse of the future. Businesses that enable digital capabilities experience a number of benefits:

- Enables remote, office and mobile workforce
- Maximizes employee productivity
- Provides efficient workplace utilization
- Improves facilities management for common areas

Deliver uninterrupted WiFi and wired connectivity for environments where mobile, IoT and cloud connections are mission-critical.

Mobile devices have changed how we work. The digital workplace has become more social, data-driven and consumer-like. The expectation is that the work we do, the applications we use, and the information we need are available from any device.

The future of work will be defined by smarter work experiences. A future that combines the right technologies with workspaces designed to enable creativity, collaboration and innovation.

However, collaborative workstyles put high demand on network access and capacity. Business-critical applications used by mobile devices require traffic prioritization and separation to guarantee performance and reliability — especially voice and video. Providing network access via wired connections is impractical, cost-prohibitive or restricts the open and collaborative nature of the workplace. Consequently, “business as usual” IT is often ill-equipped to effectively respond to the needs of the modern workplace.

Support today’s mobile first workplace

Wireless technology benefits businesses by reducing facility costs with smart buildings, small real estate footprints and the eliminating network cabling. It also helps to attract and retain today’s mobile workforce — one that demands high-performing, high-availability networks.

DXC LAN Services for Aruba, a Hewlett Package Enterprise Company, are built on a mobile-first strategy that supports the next generation of business mobility, collaboration and productivity. We deliver the highest-performing gigabit wireless network in the industry, with a robust set of indoor and outdoor access points and controllers for campus, branch and remote locations.

Our solutions are designed to support the specific networking needs of more than one thousand applications and provide intelligent traffic control that insures reliability for business-critical applications and delivers high-quality voice and video on mobile devices.

“Our solutions have been deployed globally, with high availability and performance, able to meet the most demanding business needs.”

Why DXC?

We understand the unique needs of the mobile workplace. DXC LAN Services enable businesses to support their digital workplace requirements and are committed to delivering cutting-edge, end-to-end solutions with the support of our partners.

Proven solution globally. Our solutions have been deployed globally, with high availability and performance, able to meet the most demanding business needs.

Scalable to meet demand. DXC’s LAN Services powered by AT&T are market-ready and available for deployment at scale. As the network becomes an increasingly important component of next-generation cloud-based services, we continuously improve and enhance our network services to meet client business needs.

Data center and campus delivery. We provide the expertise to advise, transform and manage your data center network foundation at scale. With software-defined networking, the wireless LAN technology enables automated and virtualized functions of the client branch and campus environments.

Key features

Tailored to fit your business needs from service implementation, service management and reporting, to optional services such as high-availability designs, onsite support, analytic services and high-availability failover testing.

We begin with proven enterprise designs, a standard bill of materials and tested, validated software versions to rapidly develop reliable and secure solutions. We architect, engineer and implement the service to ensure that your unique wireless network supports and delivers the highly mobile network services employees have grown to expect in the workplace.

As an extension of your IT organization, we continually work with you to understand your business and organizational goals, resolve any issues that may arise promptly, and provide guidance on operations and management best practices.

Following implementation, DXC provides both dedicated or leveraged ongoing 24x7 monitoring and management from our global network operations centers.
